

SQL Migration Configuration Assessment

1-Day SQL Technical Review

SQL Migration Configuration Assessment: 1-Day Technical Review

Complimentary Suitability Review

Every successful migration project begins with a migration strategy which is driven by both the technical and the business requirements.

Prior to commencing the SQL Migration Configuration Assessment, one of our chief migration consultants will perform a complimentary suitability review (30-60 min call). This review will enable us to gain an understanding of your business requirements as well as a brief overview of your current configuration.

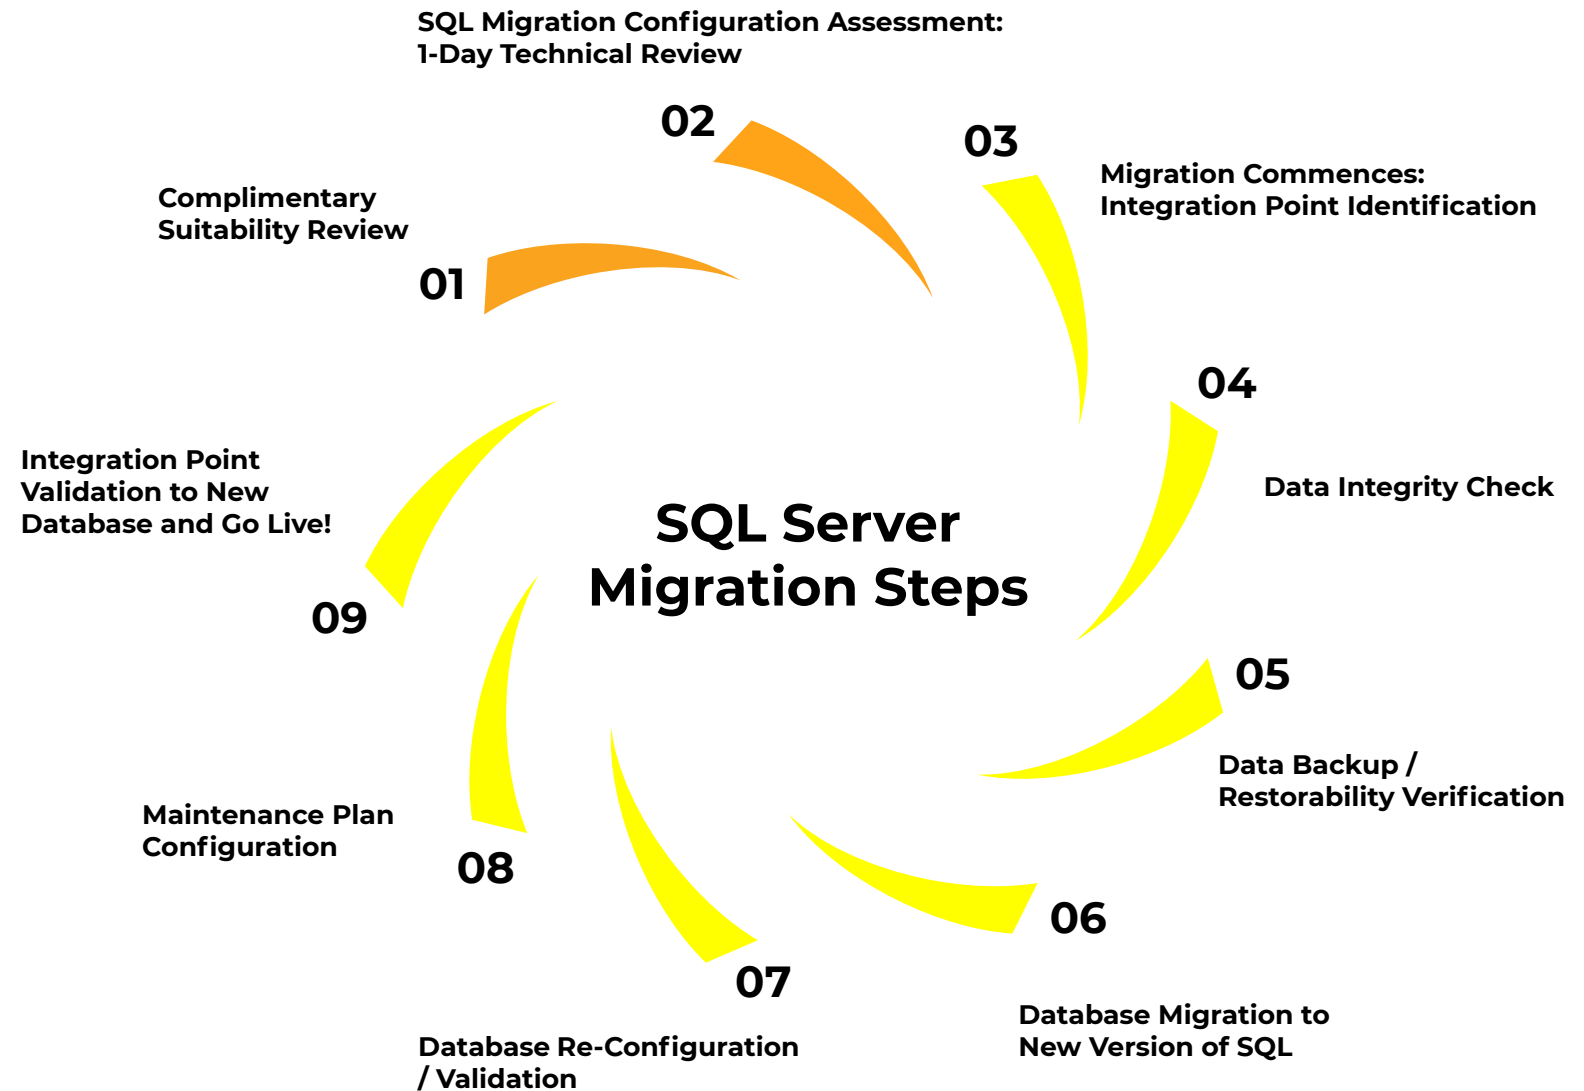

SQL Migration Configuration Assessment

Following completion of the suitability review, we will commence the 1-Day SQL Migration Configuration Assessment where we will analyse your current SQL configuration to assess the feasibility to migrate your data.

If you have any uncertainties around costs & migration best practices, this assessment will deliver crystal clear visibility around which workloads should or shouldn't be migrated to the cloud. It will also include information on how to select, prepare, extract, transform and transfer data of the correct form and quality, to another environment.

A Well-Planned and Structured Migration Plan will Minimise Business Disruption.

Every good migration project begins with a good plan and it starts by choosing the right migration and/or upgrade path. To enable success, it's important to have a detailed data migration plan comprising of the technical plans and business considerations. It should include information on how to select, prepare, extract, transform and transfer data of the correct form and quality to another environment. Every migration project is different, proving how a bespoke migration strategic approach is required to achieve organisation goals.
