Migrate Your RightAngle ETRM to Microsoft Azure

Learn how you and Opportune can move your RightAngle trading system to the cloud with our 3-Day RightAngle Cloud Migration Workshop.

As companies are looking to move more applications into the cloud, trading systems (ETRM/CTRM) are one class of application that has stubbornly resisted cloud migration. With their S20 and S21 releases fully on the .NET architecture, RightAngle is now poised to make that cloud migration easier. Opportune has developed tools to make the transition and operation more attainable with application integration and system monitoring add-ins to ensure a smooth cloud journey to Azure.

Our 3-day "Cloud Readiness" Workshop prepares your technical and trading staff with the knowledge needed to drive the migration of your RightAngle environment to the Microsoft Azure cloud. From the core ETRM/CTRM system itself to the integrated systems sharing data with RightAngle, the workshop will enable the data collection necessary to scope and estimate the migration process.

AGENDA
- Evaluate existing RightAngle environment
- Evaluate interfaced systems in/out of RightAngle
- Evaluate existing cloud/hybrid infrastructure

DELIVERABLES
- RightAngle Footprint Assessment
- Application and Infrastructure Migration Readiness Scorecard
- Migration Proposal

Opportune RightAngle Monitor for Azure
