

SharePoint Workflow Modernization with Power Platform

Modernize legacy SharePoint workflows fast—and unlock the full value of Power Platform.

This 4-week engagement helps organizations modernize legacy SharePoint 2010/2013 workflows by replacing them with Power Automate and Power Apps. The engagement validates Power Platform as a scalable modernization path, accelerates time to value, and demonstrates measurable ROI within Microsoft 365.

Organizations running legacy SharePoint workflows face operational inefficiencies, increased maintenance costs, and limited automation capabilities. End-of-support risks and poor user experience hinder productivity and slow digital transformation.

Engagement Includes:

- Current-state workflow and forms assessment
- Requirements definition and modernization roadmap
- Replacement of 5–10 SharePoint workflows using Power Automate and Power Apps (based on complexity)
- User acceptance testing and production rollout
- Transition plan and next-phase recommendations

Outcomes & Value:

- Reduced manual effort through modern automation
- Improved business process visibility and governance
- Accelerated adoption of Microsoft Power Platform
- Validated modernization strategy with clear ROI
- Foundation for AI-ready business processes

“Optimum’s ability to prioritize our project and work with us to meet our ever-evolving needs was exactly what we needed, and we would not have been able to successfully implement without their tremendous support.”
