

Managed Platform is a technology solution that provides customers with a single outsourced technology service encompassing all aspects of financial sector technology. The service can be delivered globally with a particular focus on key technology centers in Asia, Europe and the U.S.

Leveraging almost 30 years of experience, the platform blends security, compliance and engineering best practices with the latest advances in cloud, desktop and mobile technology. The solution is fully managed with a 24x7, white glove support desk.

Options Managed Platform offers customers flexible application and desktop virtualization service running in Microsoft Azure.

Whether supporting hundreds of users in a highly available multi-session Pooled WVD environment or a fleet of high-end Personal WVDs for a team of quantitative analysts, Options can design, provision, and manage your environment quickly, securely and at scale.

KEY FACTS

QUICK FACTS

Cost-effective, virtual desktop solution

Delivered across a truly global backbone network

Scale easily and quickly - support a sudden pivot to WFH in hours

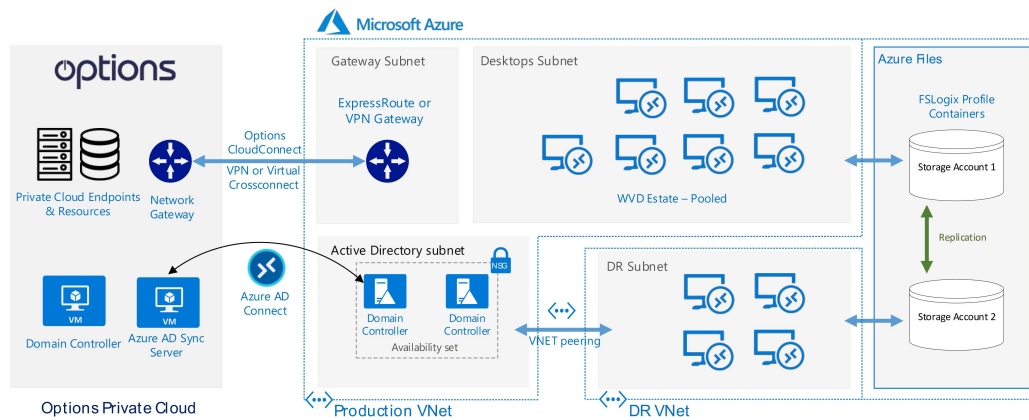

For our WVD clients during the COVID-19 pandemic, within hours we were able to scale small deployments of machines to an estate that could support their entire firm working from home full-time.

All data, including user profile data, is backed up nightly with 30 days retention. Monthly backups are also made and retained for 7 years.

For clients who are using WVDs as their primary desktop device, High Availability can be configured to allow failover to another zone or region should Azure have a major incident.

Options CloudConnect solution can be used to provide suitable secure connection back to Options Private Cloud resources, with scalability from lightweight VPNs up to 10Gb virtual cross-connects.

All our WVDs come with Trend Antivirus protection, Endpoint Detection and Response (EDR) and Webfiltering as standard, overseen by Options SOC and Security Teams.

Datapoints are collected at the session and host level, as well as metrics collected from Azure itself. These metrics can be made available to clients via custom reports, or in dedicated Splunk instances.
