# Discovery + Design
Power App Engagement

Prepare for success with your next automation initiative

SOCO's Custom Power App Discovery and Design engagement was created to ensure success for your next automation initiative. Together with key stakeholders within your organisation, we will identify pain points with your current process, design the solution application and deliver detailed documentation outlining the steps required for successful, build, test, launch and adoption.

Kaja,
Senior Microsoft
Consultant,
SOCO

Reduce risk and expertly develop stakeholder buy in

Starting with a review of your current process, SOCO's expert team will design the optimum future state, and deliver a high-level solution design accompanied by a presentation of our technical approach and a formal proposal for implementation, including development and relevant associated services such as training, change management, testing and project management.

Discover

Understanding the current business process(es) and the associated issues and pain points

Design

Designing the future state business processes, and translating this within the Power Platform technology stack

Security + UX

Documenting the underlying data and security model and the ideal User Experience
