Next gen Property Management – Embrace the future in the cloud

Are you stuck in a custom-built system that is difficult to adapt and integrate with external systems? Perhaps your company is in the middle of a digital transformation where you want to digitize manual processes and feel that the system does not set limits.

In our comprehensive solution based on Microsoft's platform, we collect all data in one place and thus make it possible for you to both increase your profitability and improve the service to your customers. In the system, which is available on all devices, you always have a full overview of your customers and can see what stage different processes are in.

Fellowmind Property Management perks

We are Fellowmind

As one of Europe's market-leading companies, we help our customers to the next level through Microsoft's cloud-based business solutions and personal guidance with deep industry knowledge. With our expertise in business systems, data analysis, CRM, digital collaboration tools and intranets, we make our customers' businesses ready for the future.

At Fellowmind, we not only deliver the solutions but also help end users learn them. Our goal is to get people to love working with technology and for technology to work for them. What sets us apart from other solution providers is our way of combining digital transformation with personal development. Everything to get people and technology to work together.
