iServer

Enterprise Transformation Suite

Future-Proof Your Enterprise With Orbus Software & iServer

Orbus Software is the global, independent software developer of the award-winning iServer Enterprise Transformation Suite.

> " *In all of my 20+ years of IT experience and in working with vendors, I have never worked with a more reliable, responsive, and customer-attentive vendor.* "
>
> **Senior Enterprise Architect, Energy & Utilities**

Integrated Support for Enterprise Transformation

Successful transformation is not the result of a single business or IT practice but requires integrated solutions supported by a central collaboration platform.

- Enterprise Architecture & Strategic Planning
- Enterprise Business Process Analysis
- Governance, Risk & Compliance
- Strategic Portfolio Management
- iServer

Impressive Dashboards, Diagrams and Roadmaps

iServer's attractive visualizations provide stakeholders across Business and IT with the essential insight needed to navigate complex decision making.

> " *iServer is our hero when it comes to analyzing our information – actually seeing the impact of change across the business really was key.* "
>
> **TVTC, Saudi Arabia**

Ease of Use Driven through Microsoft Apps

Use of Visio and Office Apps maximises iServer's ease of use, providing a familiar environment which is very quick to deploy and adopt.

> " *iServer has been an absolute accelerant for us. It has a huge amount of utility and it's very, very easy to bring someone on board and get them to be productive in a short time.* "
>
> **CohnReznick, USA**

First Class Customer Experience and Learning

Orbus combines highly personalised support along with a dedicated 'Learning Ecosystem' to provide award winning customer experience.
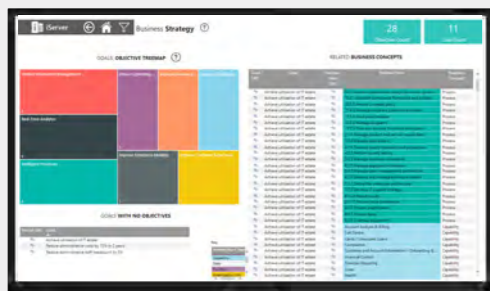

> " *This is truly a vendor that will walk every mile with you, every step of the way, very dedicated and will break down mountains to deliver.* "
>
> **Senior Technical Architect, Finance**

Create Views

Create unique views of the architecture using out-of-the-box templates

Collaborate On Deliverables

Collaborate on content to produce roadmaps and other signature-ready deliverables

Share Content

Share profile specific content with the wider business and gather critical feedback

From Strategy...

...to Execution

Execution

Strategy

Prioritization

Ideation

Assessment

Strategy:

Formulate corporate objectives and translate them into models and artifacts. Use a common language to express strategy.

Ideation:

Leverage the expertise of your employees to crowd source tactical ideas aligned to strategic challenges.
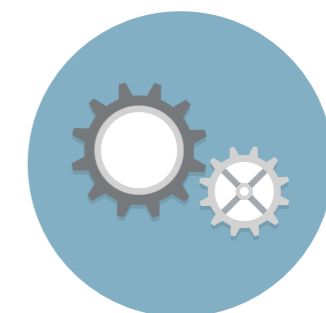

Assessment:

Assess across ideas, strategic projects, IT investments and business portfolios. Rate on strategic value, cost, functional duplication and more.

Prioritization:

Leverage assessments to make apples to apples comparisons. Prioritize based on available capacity and pre-defined criteria.

Execution:

Report on the operational execution of strategy and visualise the impact of projects on the enterprise landscape.

Proven Success Delivering Your Strategic Goals

Canton of Jura, *Switzerland*

Digital Transformation

Canton of Jura's complex internal environment became increasingly difficult to manage with the addition of new initiatives, technological advances and newly emerging practices. iServer was brought in to act as a central repository for all projects.

> " *iServer was definitely the best tool... it is great for presentations and a central actor for the future transformation we are planning.* "

Vattenfall, *Germany*

Application & Technology Rationalisation

Due to a long history of mergers and acquisitions, Vattenfall had always struggled with their IT footprint and application consolidation. They implemented iServer to help with effective project scoping and the creation of a clear line of sight between applications and projects.

> " *From an APM perspective, iServer does a better job than Planview and is much more cost-effective... the usability and configurability are impressive, even for modifying the meta-model. It's 30% cheaper to maintain the tool, and that's not counting the benefits it creates.* "

Cambridge Assessment, *UK*

IT Rationalisation

iServer was employed to help manage IT complexity arising from hundreds of systems that support a complex, global infrastructure delivering a very wide range of products. The iServer platform helped Cambridge Assessment to create a collaborative environment and encourage dialogue whenever a new initiative needs attention.

> " *Every project has its materials created using iServer... from the first analysis of project objectives, it's all modelled within iServer. But we're doing it faster than we've ever been able to do it before.* "

Kellogg's, *USA*

Application Portfolio Management

iServer was brought in to help the EA practice cut costs with APM by enabling collaboration between disparate, uncoordinated teams, minimise resource waste and set up an effective governance and ownership structure.

> " *Everything's been built in iServer. Having one source of truth gives us great visibility and it plays a foundational role in our transformation. Modelling is one of iServer's biggest strengths; that and it being quickly picked up by people. So A+ across the board there.* "

Hamilton City Council, *NZ*

Cloud Migration Initiative

HCC used iServer to create and execute on a detailed plan for migrating operations to the cloud, complete with roadmaps and impact analyses and ability to assess the impact of new initiatives on existing application and technology landscapes.

> " *When you do your cloud migration, understanding your solution architecture and having it visible and accessible is the single most important aspect that determines success. The visibility you get with iServer is unparalleled.* "
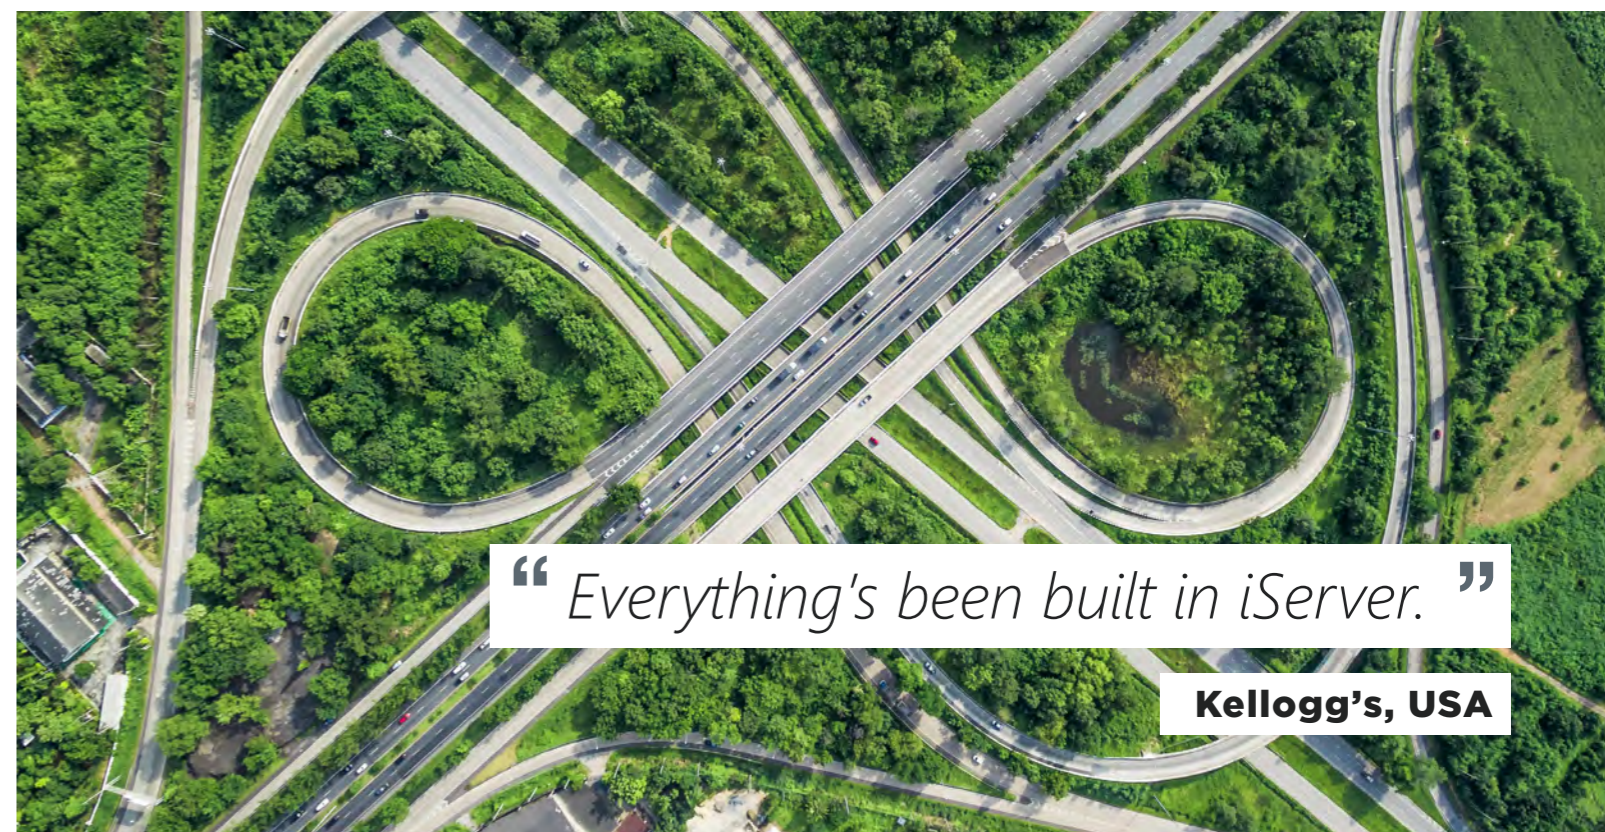

EIF, *Europe*

Process Optimization Initiative

iServer helped EIF create an accurate representation of the organisation at various levels of detail, provided a means for established stakeholders to revisit their procedures, and exposed valuable opportunities for improvement.

> " *iServer lets us communicate to different areas of the organisation using tailored deliverables in order to maximise understanding among our audience... I would especially emphasize the ease of connecting different types of diagrams to build a readily navigable landscape.* "

> " *Everything's been built in iServer.* "
>
> **Kellogg's, USA**
