

AI-powered testing platform that brings confidence to every release.

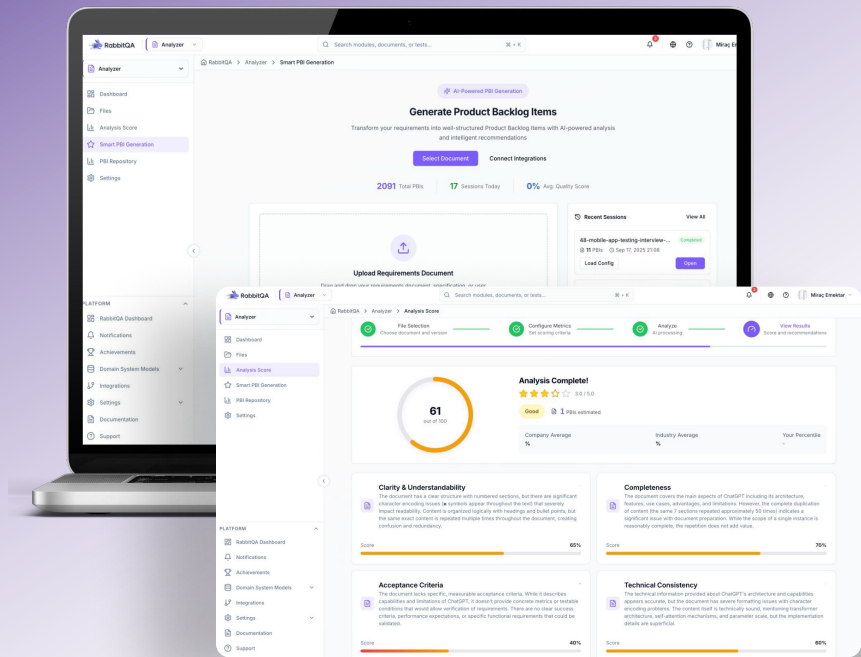

An AI-powered QA platform that analyzes your documents, creates PBI's and centralizes test runs — so teams ship faster with confidence.

All Platforms web | mobile | desktop | service

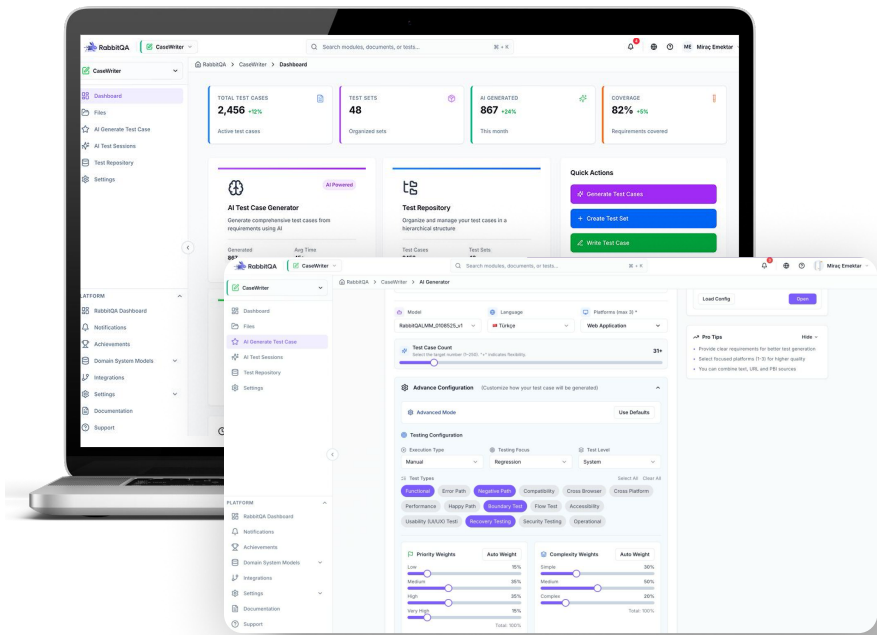

Analyzer Document analysis & PBI generation with AI

Analyzer transforms requirements, documents, or user stories into structured insights and ready-to-test PBIs. It automatically detects gaps, inconsistencies and dependencies — helping QA, PM and Dev teams accelerate testing cycles and ensure traceability from documentation to execution.

CaseWriter Create, edit & upload test cases with AI.

CaseWriter empowers QA teams to design, organize, and maintain test cases effortlessly. Using AI-driven generation and it transforms user stories or PBIs into complete, structured test cases — ensuring full coverage and consistency across projects.

TestPilot Centralizes manual and automated test runs

Allowing teams to manage sessions, monitor progress and analyze real-time results. It bridges QA, Product and Dev workflows to ensure every release is validated, traceable, and faster to ship.
