

Real-time transportation visibility. Unrivalled risk management & theft recovery. One provider.

Complete control with one platform

Multi-modal visibility and risk management that injects realtime, corrective responses into your operations.

Overhaul simplifies the dynamic nature of the supply chain system, delivering a less fragmented picture to help recognize when - and how - to take corrective action.

Track every shipment. View all assets. Mitigate risk.

24/7-365

**In-transit
Response &
Theft Recovery**

Overhaul's sentinel SAAS solution

We've seen how resources spent manually organizing disconnected data delays mitigation efforts and increases risk for errors. **So we solved for it.**

Manage from a single unified view

- Actionable insights for all shipments
- Multi-modal Visibility: Air, Ocean, Road, Rail, Barge, Last-mile, & Parcel
- Connect ERP, TMS, WMS, ELD Telematics & IoT/ GPS tracking & monitoring devices.

Become situationally aware

- Manage risk by exception
- Efficiently identify non-conformances
- Proactively plan for effective risk mitigation

Refine new parameters around your shipments

- Create strict boundaries
- Customize operating parameters
- Workflows to manage your risks in real-time
- Real-time Corrective Actions

Remove data silos

- Access aggregated data
- Eliminate tracking redundancies
- Achieve no single point of failure

YOUR RISKS

Product and Brand Protection

Moving high-value cargo increases risk of theft resulting in property damage, exposed brand-sensitive information, and a tarnished company image.

Product Quality (TTS)

Protected product integrity not only saves on company time and costs but is often the difference between saving lives and avoiding meeting regulatory requirements.

Up & Downstream Communication

Gaps in communication often stem from poor supply chain visibility, leading to increased resources spent on manual processes and higher probabilities of security issues.

OUR SOLUTION

Single Unified View

View every point of data around your shipments at once and receive real-time alerts and predictive data that spot theft trends and measure risk based on custom alerts.

Multimodal Control & Monitoring

Our TTS Countdown Timer feature delivers risk management visibility across any mode from predictive ETAs to individual responsibility for packaged goods.

Automation

Our platform connects multiple data sources into a single dashboard allowing for quicker assessment of risk related events and more proactive operating processes.

How Overhaul gets the job done

PAINLESS IMPLEMENTATION

Flexible integration solutions to connect your existing data sets.

- 1 **Device Agnostic Approach**
Track and monitor high-value, time and temperature sensitive shipments in real-time with our provided IoT devices.
- 2 **Deviceless Approach**
Our platform utilizes telematics and ELD integrations to connect data from your existing hardware, saving on implementation time.

Overhaul led a solution design and implementation process that required 6 participating companies to integrate their technologies and/or services to produce a custom solution that assured secure transport of high value desirable cargo in a very insecure geography.

Industry: Consumer Goods

LIVE MONITORING

Security tools and services proven to reduce overhead and improve customer experiences.

30% Optimization of costs through digitizing manual processes.

-ROI Data from Overhaul Security Customers

Additional Security Support

Leverage Sentinel's powerful real-time monitoring and visibility as an added tool, improving your existing security and risk mitigation operations.

Managed Security Services - Fusion Hub

Overhaul's Fusion Hub homes your personal team of Watch Officers, skilled supply-chain monitors who analyze real-time situational data and take proactive approaches to instantly correct shipment deviations.

IN-TRANSIT LAW ENFORCEMENT CONNECT

24/7 recovery support utilizing private network data to assist law enforcement with theft response efforts.

Overhaul's patent-pending LE Connect Link immediately sends a secure tracking link to Law Enforcement and Security Partners allowing them to deploy immediately. Accessible data and automated databases supplies global responders with the information needed to track, secure, and recover your cargo.

80%

reduced theft attempts.

\$5M

saved within 6 months.

-ROI Data from Overhaul Logistics Customer

Strong security monitoring experience, willingness to tailor a cost effective solution to our needs.

FROM YOUR TRUSTED NETWORK

Our custom approach offers multiple ways to partner with our platform, from complete integration, including device and hardware upgrades, to fitting into your existing operations by acting as an overlay of added visibility to your current operating systems.
