

Microsoft Entra Suite Workshop

Discover the comprehensive identity and security capabilities of Microsoft Entra

As organizations grow and evolve, managing identity and access becomes a critical challenge. With increasing regulatory demands, complex workforce structures, and heightened security concerns, the need for a comprehensive, reliable solution is clear.

The Microsoft Entra Suite is designed to provide organizations with comprehensive tools to ensure that the right people have the right access to critical systems, maintain trust in user identities, and safeguard sensitive data, all while being flexible enough to meet the specific requirements of your industry.

What does the Microsoft Entra Suite Workshop offer?

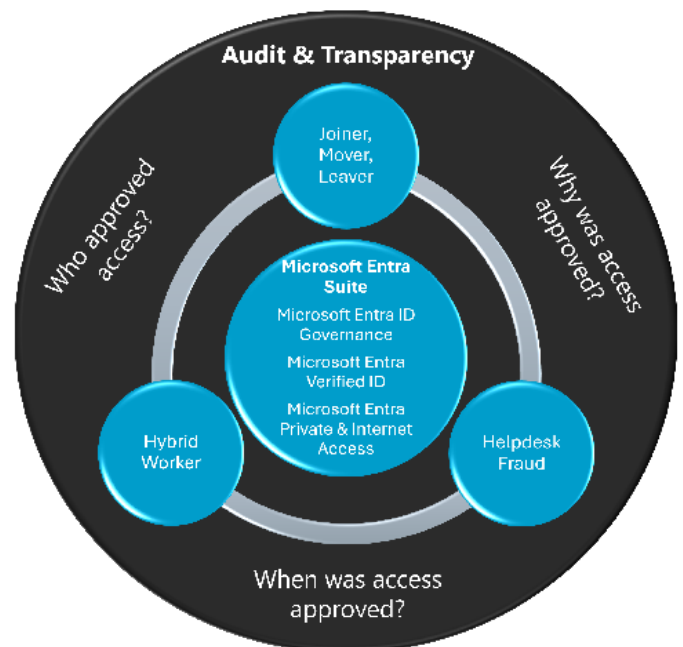

The workshop is for decision-makers and influencers who want clear, practical ways to solve their organization's identity and access challenges. We focus on real-world results, tailoring the content to fit your industry's specific needs. Through custom scenarios, you'll see how Microsoft Entra Suite simplifies your processes, enhances oversight, and tightens security.

See how the Microsoft Entra Suite can improve identity workflows using real-life scenarios, including:

- **Joiner workflows** that accommodate the unique requirements of new hires, both from the hiring manager's perspective and the new employee's experience.
- **Mover workflows** to ensure employees transitioning to new roles within the organization have their access updated quickly, securely, and accurately.
- **Leaver workflows:** when an employee leaves, access is revoked efficiently and without delay, reducing security risks.
- **Fight fraud at the helpdesk** with strong identity proofing processes that ensure users are who they say they are, reducing fraud and improving trust.
- **Hybrid worker scenarios** that provide flexibility in access management for remote or hybrid workers, ensuring seamless access while maintaining strong network security, protecting sensitive data from potential threats, and reducing reliance on aging VPN technology.
- **Audit logs and transparency,** get a complete view of when and why access was granted, along with who approved it - essential for governance and compliance programs.

Industry-Specific Insights

The workshop can be tailored to any industry. For example, in the healthcare industry, OCG has deep experience integrating the Microsoft Entra Suite with systems like Epic and Workday, helping to streamline credentialing, automate processes, and manage access and identities. In healthcare settings, this ensures that high-risk roles have secure, seamless access to critical systems, all while meeting industry regulations.

Why choose Oxford Computer Group?

Oxford Computer Group (OCG) has been at the forefront of identity and access management solutions for over two decades. We've worked with organizations across a wide range of industries to customize Microsoft Entra Suite solutions to improve operational efficiency, enhance security, and ensure compliance. Our expertise lies in creating solutions that address the unique challenges organizations face, whether it's reducing helpdesk fraud or integrating complex systems like Epic.

Join us in this workshop to learn how the Microsoft Entra Suite can elevate your organization's identity governance and help tackle the challenges of managing access securely.

Together, we'll explore practical solutions to keep your operations secure and efficient. If you'd like to learn more or have any questions, feel free to contact us—we're here to help.
