Enable productivity and secure data with Microsoft Entra ID identity solutions

In today's business environment, enterprises in all industries must support the value brought by the increasing numbers of remote workers, contractors, partners, and customers who access resources across multiple cloud services.

CHALLENGES

As more employees work remotely and cyber attacks continue to increase, enterprises must provide an environment that enables employee productivity while keeping identities and assets secure.

IDEAL SOLUTION

Oxford Computer Group's Microsoft Entra ID identity solutions are customized to your organization's needs. Microsoft Entra ID combines easy single sign-on to any app with advanced protection. It provides internal and external users a single identity to access resources and enables easy collaboration from any platform. Overall, Microsoft Entra ID protects identities and streamlines IT processes.

DESIRED OUTCOMES

Using Microsoft Entra ID as the identity control plane frees up resources and improves an organization's security posture. It enables a streamlined identity and access process, which leads to an improved user experience and collaboration.

Custom Microsoft Entra ID Identity Solutions

Oxford Computer Group's Enterprise Identity Solutions with Microsoft Entra ID can transform a business into a centralized, cloud-first, mobile-first organization that is more secure and compliant.

1 CONNECT YOUR WORKFORCE

Give on-site and remote users seamless access to applications and resources to maximize productivity. Automate identity lifecycle management and provisioning.

2 SECURE IDENTITIES AND GOVERN ACCESS

Implement strong authentication and conditional access policies to ensure that the right people have access to the right resources at the right time.

3 IMPROVE APPLICATION ACCESS

Support single sign-on and user provisioning for your apps. Improve the user experience and automate the creation and maintenance of user accounts.

Oxford Computer Group's Custom Microsoft Entra ID Identity Solutions and Microsoft

OCG brings deep identity and security expertise to complex enterprise environments, and with Microsoft Entra ID we helping our customers streamline processes, improve user experiences, save money, and move towards a Zero Trust security posture. Microsoft Entra ID gives our customers a leading IAM offering with comprehensive and always evolving capabilities, from SSO to managing external identities.

MICROSOFT ENTRA ID IS A COMPREHENSIVE IDENTITY SOLUTION ON A SINGLE PLATFORM

With Microsoft Entra ID customers get a comprehensive feature set that includes directory services, identity federation, and access management in the cloud in a single solution with extensive integration opportunities. And OCG can help deploy it all.

IMPROVE SECURITY POSTURE WITH ZERO TRUST CAPABILITIES

OCG implements Microsoft Entra ID's extensive security feature set, including MFA, identity governance controls, conditional access policies, PIM, and more.

GET ACCESS TO THOUSANDS OF APPS WITH ONE IDENTITY

Microsoft Entra ID can empower a productive workforce – be it remote or on-site. OCG helps to implement SSO, and more.

Customer success: Intralox uses Azure AD B2C to build a secure, self-service portal that customers can access with their own corporate identities

“Azure AD B2C allows us to give our customers self-service tools that make working with us easier, without putting our intellectual property at risk.” – Rich Rodemann, System Architect, Intralox

“Finding a resource like Oxford Computer Group is uncommon. They are credible and experienced in the identity space. Without Oxford, we couldn't have done what we've done so far,” says Rodemann.

Enable Easy Access

With Azure AD B2C (now Entra ID), Intralox's customers can sign into their app using Single Sign-On with their corporate account – no need to memorize or manage a new password.

Protect Sensitive Data and IP

“With Azure AD B2C customers authenticate using the account provided by their employer. When they quit their company or change jobs, their username and password are no longer valid. This significantly reduces the risk that a non-customer will get access, which was a huge plus for us,” says Rodemann.

...And On Choosing the Right Partner for the Job

The Intralox team did not have the experience with Azure AD B2C to architect and design their solution, so they found Oxford Computer Group. They have deep experience implementing identity and security solutions, and “finding a resource like Oxford Computer Group is uncommon,” says Rodemann.

Channel partner success: Streamlining Identity & Access Management After M&A for a Large Consumer Goods Organization

Oxford Computer Group created and implemented a reusable template for standardizing on a single identity using Microsoft Entra ID as this customer makes additional acquisitions. Now, they can quickly integrate new companies into their collaboration platform and grant access to existing applications and the applications of newly acquired companies.

Streamlined Identity and Access Processes

OCG created and implemented a pattern of integration for consolidating multiple identities down to a single identity for application access and collaboration. This process also improved user experience by providing users with a single identity (Entra ID SSO) that can be used across organizations for app access and collaboration.

Improved Security

OCG helped our client consolidate three disparate identities with different entitlements and account security to one single identity with Microsoft Entra ID MFA and conditional access.

Lower Integration Costs for Mergers & Acquisitions

OCG provided a proven template for integration which can be re-used immediately for existing and future mergers and acquisitions. Following this template will lead to streamlined application access and collaboration without the high technical debt of multiple disjointed identities.
