

Frontier AI Data Foundry Platform

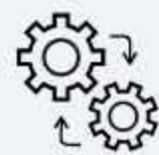

Empowering enterprises with scalable, secure, and efficient AI solutions to accelerate innovation.

Key features

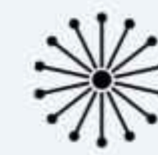

Data Marketplace

Off-the-shelf datasets, dataset creation, data pre-processing

AI Workbench

Fine-tuning, red-teaming, benchmarking, HITL

Gen AI Studio

RAG pipeline & evaluation, AI workflows, model baselining

Gen BI

Generate actionable insights

AI Governance

Data governance, compliance

Infra Hub

AI pipeline management

Benefits

Accelerated AI Development & Deployment

Reduced Cost & ROI Maximization

Enhanced Data Quality & Model Accuracy

Increased Model Reliability & Safety

Benefit from an integrated partner ecosystem

Unlock the full potential of AI with Centific's frontier AI data foundry

— Streamline AI workflows

Pre-built AI pipelines for RAG, video/audio indexing, unstructured data processing, benchmarking, fine-tuning, and entity extraction accelerate time to production.

— Optimize AI operations

Integrated workspaces and resource management tools enhance efficiency and simplify AI Ops.

— Deploy high-performing models

Robust benchmarking ensures only top-performing AI models go into production.

— Refine with human input

Human-in-the-Loop functionality enables continuous model improvement through integrated human feedback.

— Cloud-agnostic & scalable

Seamlessly operates across Azure, AWS, GCP, and on-edge solutions like NVIDIA, adapting to various industries.

— Ensure compliance & security

Built to meet regulatory standards while enabling enterprises to deploy AI with confidence.

Explore case studies

High quality GenAI training data

Centific leveraged platform-driven AI orchestration and PhD-level domain expertise to train and scale a foundational model for a global smartphone leader.

— Results

Higher-quality, more usable GenAI training data, delivering greater flexibility, control and improved AI performance.

AI-powered e-commerce chatbot

Centific helped build an AI-powered e-commerce chatbot capable of helping customers save time and make more informed decisions through natural language queries.

— Results

The refined version of the chatbot's model made for a friendly expert shopping assistant with an expanded knowledge of the client's products and customers.

Inventory shrinkage reduction using AI

Centific's platform empowered the client to reduce inventory shrinkage and enhance loss prevention through the deployment of an advanced computer vision solution.

— Results

AI-driven early detection of potential inventory shrinkage during transactions resulted in reduced inventory loss and substantial savings.

Elevating GenAI Security & Reliability

Centific's platform enabled the systematic measurement and ranking of harm within multiple version of foundational models.

— Results

Substantial improvements in the safety and reliability of Microsoft's Gen AI models and applications.
