
Cost Optimisation Assessment

**Get the greatest
value from
your cloud
environment.**

Is your cloud environment delivering the best value for your business needs? Each business has differing utilisation levels, end-user requirements and long-term goals from its cloud solution which need to be aligned with budget.

Your cloud environment will change as your business grows. Ensuring your solution is structured to deliver an optimised cost structure is vital to getting the best value from your cloud investment.

Our customisation assessment evaluates your current spend and utilisation patterns to identify opportunities to reduce waste, save costs and improve your cloud environment's cost-effectiveness. The assessment considers such areas as:

Assessment Workshop

The assessment is delivered through a workshop to develop a comprehensive understanding of the current state of your cloud environment, identify areas for optimisation, and lay the foundation for developing a cost-effective cloud strategy.

Recommendations

Following the workshop we will produce a report with recommendations for improving the cost-effectiveness of your cloud environment. This will include recommendations for where savings can be made, such as optimisations or possibilities for right-sizing your environment, options for automation and scheduling, options for more cost-effective services to achieve goals and identification of orphaned resources that are no longer needed.

Follow up

The report creates a roadmap for work that will deliver improved cost optimisation. On request, we can then create a Statement of Work for any of the recommended actions, covering such items as governance systems and policies to enforce cost compliance, changes to your cloud environment to right-size resources and implement features like auto-scaling and automation, and the migration of resources to new subscriptions to leverage better pricing.
