Paramount has a successful track record of implementing Data Protection Program across largest banking, financial, healthcare and government sectors in the GCC area.

## See what customers are saying:

*It was excellent experience working with Paramount team on Azure Information Protection Implementation and Advisory initiative of the bank. They understood the requirements well and provided resolution to issues / challenges. Paramount Computer System helped us in enabling data classification for bank – wide users. Team also helped us classifying the legacy documents. The team was always reachable and supportive whenever asked for*

*– Assistant Vice President, Largest Banking sector in U.A.E*

## Paramount SecureData360

Paramount's SecureData360 consulting service leverages the Microsoft Purview suite of product portfolios provides a comprehensive data protection & governance capabilities that makes organization comply with the legal and regulatory standards. Paramount Data protection consulting service along with technology tools from Microsoft Purview helps you achieve 360-degree data protection.

Purview Information Protection, Microsoft DLP & IRM, Microsoft Intune included with Microsoft 365 E3 / E5 Licenses.

**Purview Information Protection** is the data classification & labelling solution to classify and protect your data. Data classification is the baseline for any DLP solution.

**Microsoft DLP & Insider Risk Management** in-depth content analysis using regular expressions, keywords, internal function validation and secondary data match makes Microsoft DLP one of the best in the market. IRM Provides insights about potential data theft based on employee data sharing patterns.

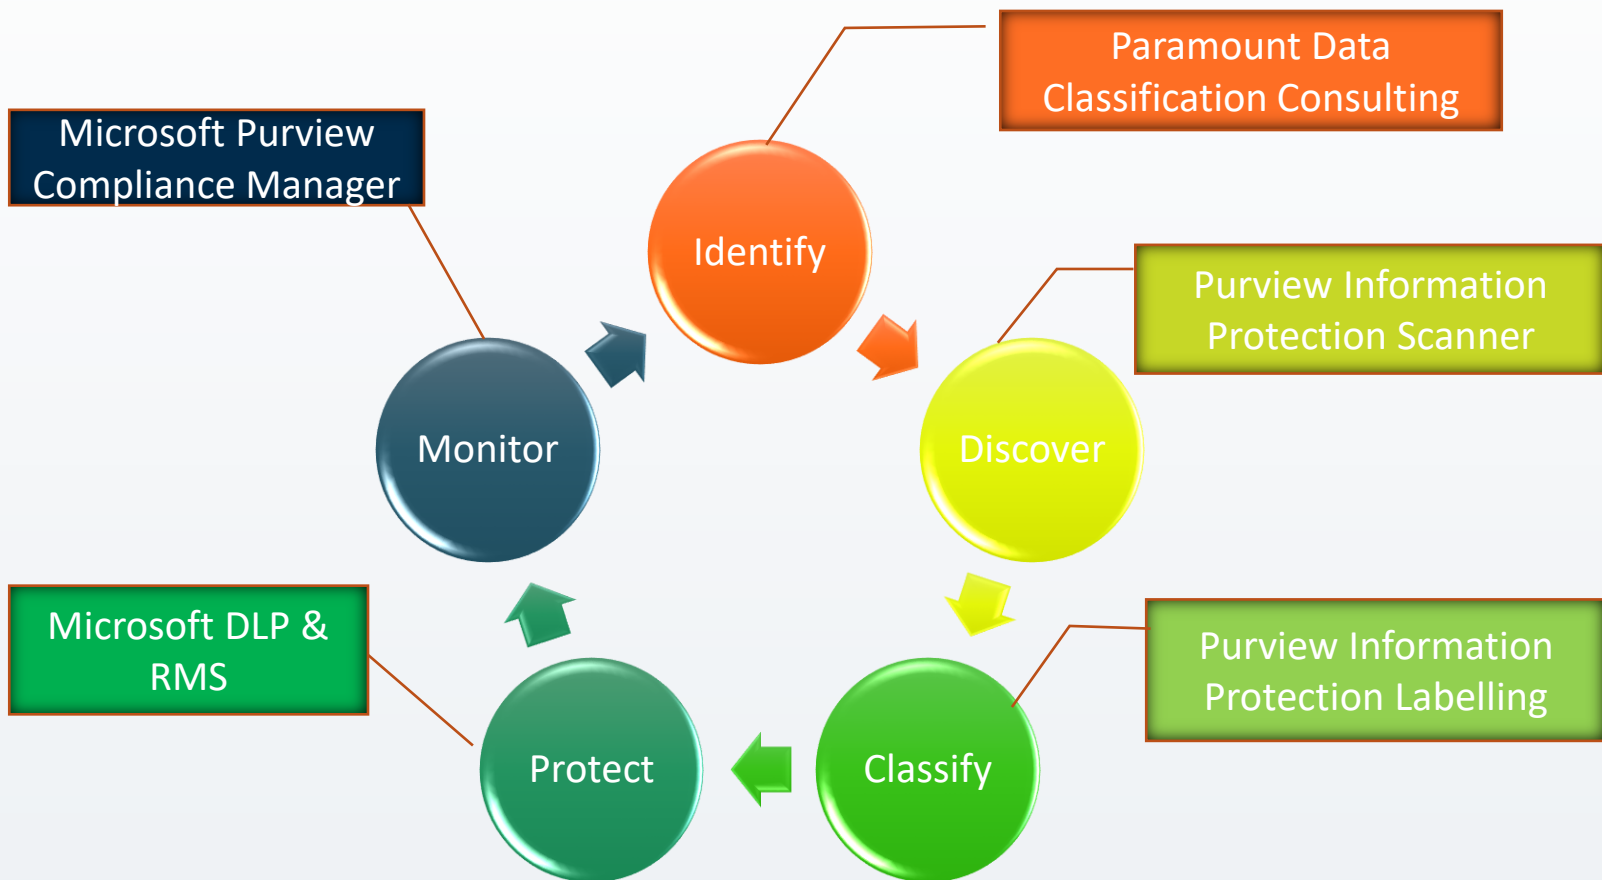

**Microsoft Endpoint Manager (Intune)** – Organization data from devices and applications can be protected using Microsoft Intune.

**Data lifecycle management** – An automated management of data retention and deletion is something that every organization looks upon. Records Management and Automated policies makes sure data is retained and governed as per regulatory requirements.

**Compliance Manager** – Helps to identify the compliance level in an organization across different verticals and provides key improvement actions that can be implemented..
