

THE MODERN DATA ENTERPRISE

WHAT IS THE MODERN DATA ENTERPRISE?

A Modern Data Enterprise seeks to consistently deliver value by driving decisions and action from data across the entire value chain. It aligns governance with the overall data strategy and centers around a platform that supplies value unique to your organization. This approach allows your organization to uniquely craft the way you handle data now and in the future. Pariveda is able to assess your organization's current data maturity and recommend the steps to achieve better insight and make better decisions.

MATURITY MODEL

The methodology and approach to building data maturity comes from years of experience providing strategic approaches that bridge maturity gaps. We can help guide you to higher levels of integration across the three pillars in this model.

| Pariveda Modern Data Enterprise Maturity Model | | | | |
|--|--|--|---|--|
| MDE PILLARS | Uncontrolled | Reactive | Proactive | Resilient |
| VALUE | No organization-wide plan or vision guiding efforts and consequently, ROI is unknown or poorly justified | Current state process defined, focused on supporting current state efforts and baseline financial estimates of projected costs and initial value forecasts | Vision of future state defined, focused on incremental improvements inclusive of estimates that consider operations | Vision and guiding principles, cost and value considerations together drive all technology efforts to reach future state |
| PLATFORM | Data Warehouse – Analytics are descriptive and immature | Data Swamp – Descriptive analytics, reporting, and visualization | Data Lake – Experimentation and beginning of predictive analytics | Data Platform – Optimization for increased scale of use-cases |
| GOVERNANCE | Lack of well-defined data stewardship and management | Data stewardship defined, manage requests and issues reactively | Proactive data stewardship and management | Data stewardship and management is operationalized |

HOW TO GET STARTED?

Schedule a workshop to begin your journey towards a Modern Data Enterprise. You will gain insights on how other companies have faced these challenges and receive a customized plan tailored to your organization.
