# Challenges with parking at the company site

1

## PARKING PRESSURE AND VACANCY

At the company location, there are not enough parking spaces available for all employees, there is **parking pressure and chaos**. At the same time, permanently assigned parking spaces are often **vacant and there is a lack of flexibility**.

2

## NO RESOURCE MANAGEMENT

When using a parking guidance system you cannot control the traffic at the **critical point** when employees drive to work from home and **groups of employees** arriving late **have no chance of finding a parking space**.

3

## SEARCH TRAFFIC

Even if you use a parking guidance system, they will only direct employees **to the parking area**. The search for free parking spaces is left to the employees, which does not help the **search traffic** in the parking area. As a result, parking happens often **"all over the place"**.

4

## NEED FOR CHARGING INFRASTRUCTURE

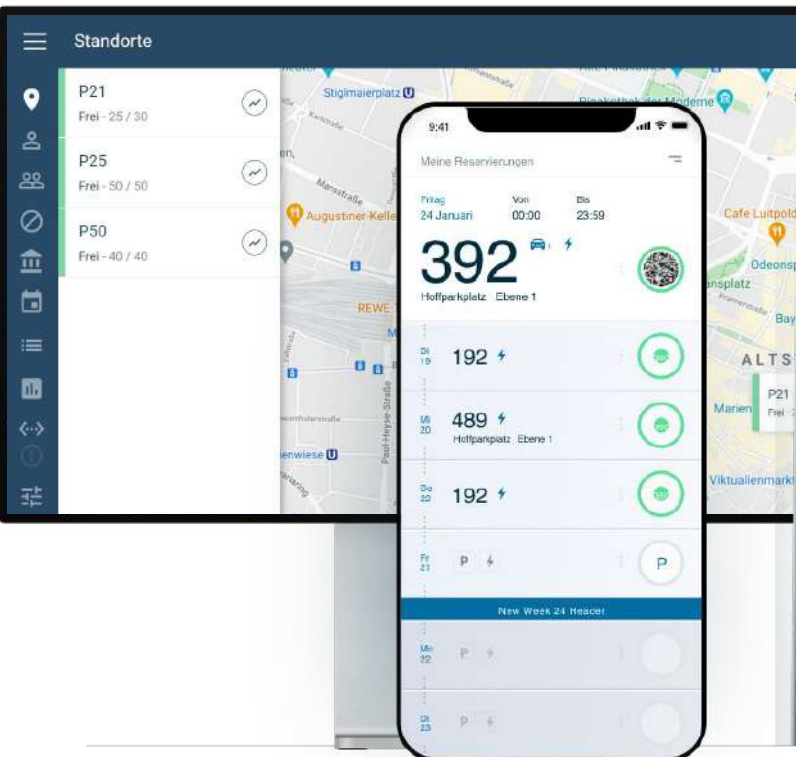

When setting up charging infrastructure at the company site, it is important to understand that not every single electric vehicle needs its own **charging facility**. **Employees can share** them according to **the sharing principle**.

## Components for an efficient parking management system

Hardware: terminal

Software: dashboard (operator) and corporate parking app (user)

1

### Smart Hardware

- License plate recognition
- QR-Code scanner

2

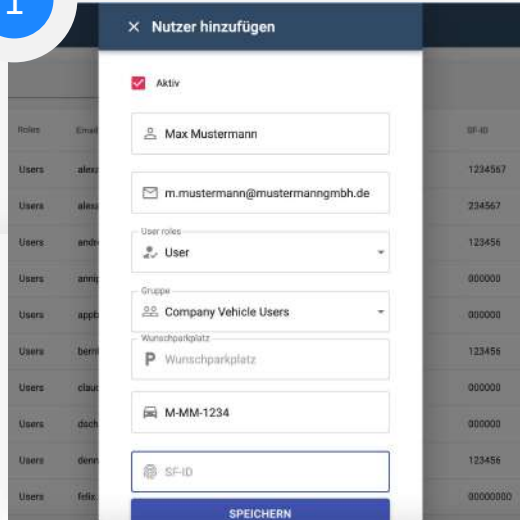

### Flexible Software

- Corporate Parking App (user)
- Dashboard (operator)

## USE CASE 1: SOLUTION APPROACH FOR PARKING SPACE SHARING

# Procedure for using the Corporate Parking System

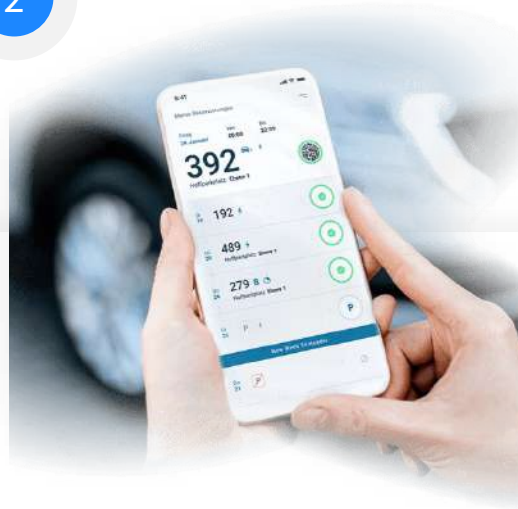

1

### AUTHORIZATION

Companies create the respective user via the **dashboard** and grant him/her the authorization via **email** to download the app and thus the possibility to participate in the system.

2

### CALENDAR BOOKING

After the successful installation of the **app** or opening of the **web app**, the user can store all relevant data in his/her profile and **book a parking space** with just a few clicks.

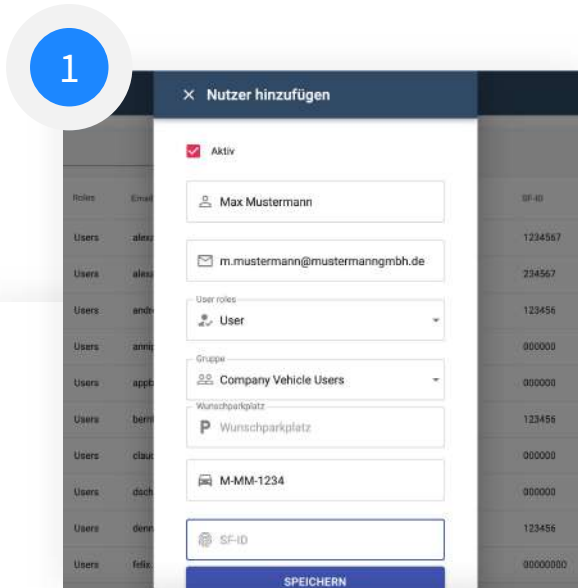

3

### PARKING

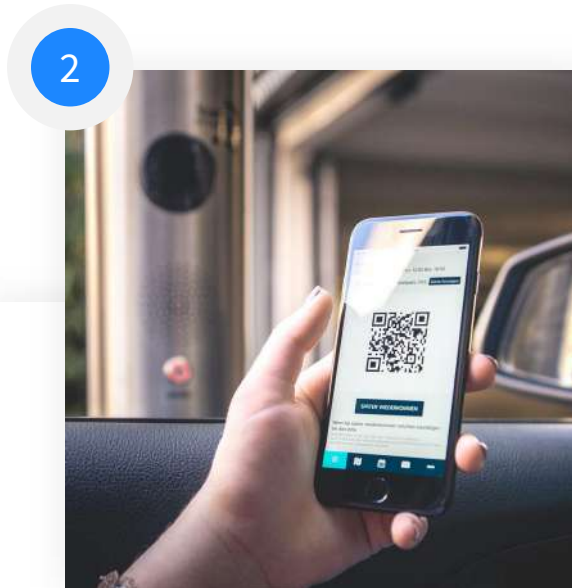

After a successful booking, verification by **license plate recognition** or alternatively **QR-Code** takes place when entering the parking area.

# Digital long-term parking without booking

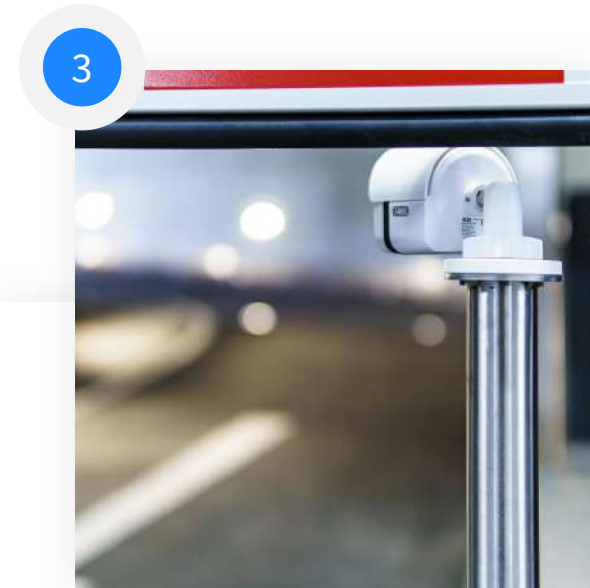

## AUTHORIZATION

Companies create the respective user via the **dashboard** and grant them permission to download the app via **email** and thus the ability to participate in the system.

## DATA COMPLETION

After successfully installing the **app** or opening the web app, the user can store the license number in his profile and view the QR code. A **fixed parking space** is assigned to a user.

## PARKING

When entering the parking area, the verification is carried out by **license plate recognition** or **QR code**, which is available in the app.

# Guest Management

The screenshot displays the 'Reservierungen' (Reservations) section of the ParkHere admin interface. At the top, the user is identified as 'parkhere.admin@demo.park-here.eu'. The main area shows a 'Gästeliste' (Guest List) table with one entry for 'Giesecke & Devrient GmbH'. A sidebar on the left contains navigation icons, with the 'Reservierungen' icon highlighted in blue. Two modal windows are open, both titled 'Gast hinzufügen' (Add Guest). The first modal shows the company name, email, and reservation details. The second modal shows the guest name, event name, and reservation dates, with two checkboxes selected: 'Gast per E-Mail einladen' and 'Termin als .ics herunterladen'. A 'SPEICHERN' (Save) button is at the bottom of the second modal.

Besucher Name	Email Adresse	Stellplatz	Reservierungs-Id	Start ↑	Ende
Giesecke & Devrient GmbH	info@gi-de.com	ParkHere_Demo - P21 - 572	b73288af-0104-43d3-b625-12e15b03c8f8	Donnerstag 29 Aug. 2019 - 14:00:00	Donnerstag 29 Aug. 2019 - 15:00:00

**01 Bookings for guests**

Here, the admin responsible in the company has the possibility to make a reservation for guests. Clicking on the + symbol opens the detailed view in which all relevant data must be entered. A reservation confirmation incl. QR code can be sent to the guests.

## USE CASE 4: SOLUTION APPROACH FOR E-MOBILITY

# A one-stop solution for parking and charging

1

### PARKING MANAGEMENT

2

### ELECTROMOBILITY SOLUTION

3

### DIGITAL PAYMENT

# On the hardware side, only the ParkHere terminal (1) is required

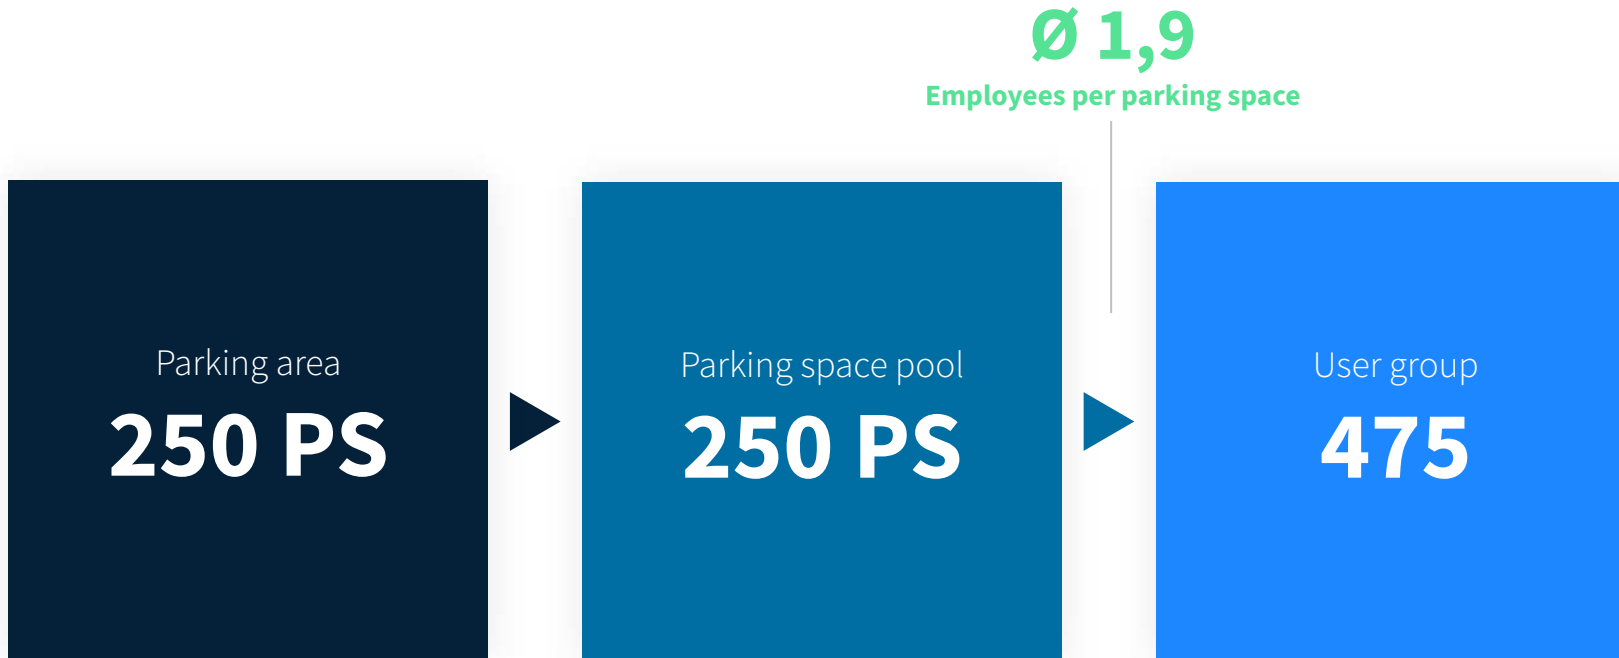

- 1 Terminal with an integrated computing unit and QR-Code reader
- 2 Camera for license plate recognition
- 3 Existing barrier system\*

\*Upon request, the procurement and installation of new barrier systems can also be depicted via ParkHere

# Occupancy status - example

GROUPS	NUMBER	PROPOSAL BOOKING OPTION
A Executives	10	Permanent access authorization / Prioritization compared to the other groups
B Employees with disabilities	5	Permanent access authorization
C Employees	70	Thursday from 6 pm for one week in advance
D Part-time employees	20	Daily from 12 pm for the following day
E Visitors	x	Daily via the dashboard
Total	105 + x	

# User group before vs. after

Based on our experience, we calculate with an optimization potential of **Ø 1.9 employees** per parking space for permanently rented parking spaces or mixed forms.

In this case **175** additional employees can use the parking spaces.

The system also offers the advantage of a **regulated** and **structured** allocation of parking spaces according to your conditions.

# For a sustainable mobility concept

### PARKEN UND LADEN BUSINESS

Die Nutzer können in der App die Ladepunkte buchen. Das Starten, Beenden sowie die Abrechnung des Ladevorgangs werden über das System erledigt. Die Kapazitätsauslastung der installierten Infrastruktur kann über das Modul optimiert werden, sodass mehrere Mitarbeiter pro Tag einen Ladepunkt nutzen.

### DIGITAL PAYMENT

A payment of parking fees as well as any costs incurred for charging the electric vehicle can be conveniently handled in the app or dashboard. This relieves the company's accounting department and makes the system flexible. Pay-per-use billing is also possible.

E-Mail-Adresse

Passwort

LOGIN

### Single Sign-On (SSO)

The user can log in to the Corporate App with his usual company credentials. This means that the dashboard administrator does not have to create the users manually beforehand, as we communicate in the background with the customer's access management service (e.g. MS AzureID).

### MS TEAMS INTEGRATION

This integration offers the possibility of parking space reservation in the MS Teams interface, so that employees do not have to switch to the Corporate Parking app / web app to book a parking space.

# Parking and Charging Lite vs. Parking and Charging Business

A

## PARKING AND CHARGING LITE

Users can book a parking space **with a charging point** for each reservation in the Corporate Parking App (CPA). **Starting, ending, and billing** of the charging process **do not take place** via the Corporate Parking App.

B

## PARKING AND CHARGING BUSINESS

Users can book a parking space with **charging point** for each reservation in the Corporate Parking App (CPA). Depending on the desired level of integration, the charging process can be **started, ended** (and invoiced) **via the Corporate Parking App.**

## UNIQUE SELLING PROPOSITION

# Your premium provider for smart parking management

### FUNCTIONALITY

Recognition of all EU license plates in milliseconds  
( $\approx$  0,6 seconds)  
QR code reader on terminal as fallback for license  
plate recognition

### EASY INSTALLATION

No LAN connection required, internet connection via  
LTE, trouble-free connection to all existing systems,  
indoor and outdoor installation

### SERVICE

Terminal with all-round carefree package:  
full monitoring, predictive maintenance,  
regular software updates

### OPTIMIZED UTILIZATION

Optimization potential of  $\approx$  1.9 employees per parking  
space for the best possible utilization of your parking  
spaces

### USABILITY

Intuitive and straightforward user interfaces and  
underlying processes

### MODULARITY

Flexibility and expandability through diverse modules  
and interfaces for mobility forms of the future

# Comparison analog vs. digital

Evaluation criterion	Analogue system with ticket or ID card	ParkHere system
<b>Fast and comfortable</b> access with license plate recognition and alternatively QR code	NO	YES + data protection compliant
<b>Visitor reservation</b> by tenants with access via QR code and license plate recognition	NO (manually)	YES
<b>Self-management</b> by tenants - Online dashboard for digital user management	NO	YES
<b>Corporate parking app</b> with reservation option and overbooking possibility of Ø 1.9 employees per parking space	NO	YES
<b>Expandable</b> with modules and interfaces for Smart parking and mobility of the future	NO	YES

# For you as the company and your employees

**Waiting list places:** Previous requests for parking spaces can be covered by the system

**Avoidance of time loss** due to parking without the annoying search for free parking spaces

Replacing a static and inflexible system with a **digital and dynamic parking management solution**

**Easy and fast reservation** of parking spaces in less than a minute

Increasing **equal opportunities and fairness** through the introduction of an automated parking system

**Order, structure and planning** through the introduction of the ParkHere system

# Excerpt of results

- User group without ParkHere: **496**
- Usergroup with ParkHere: **1,091**
- Utilization with ParkHere:  
**2,2 employees per parking space\***

Wacker Neuson  
Group

- User group without ParkHere: **153**
- User group with ParkHere: **268**
- Utilization with ParkHere:  
**1,75 employees per parking space\***

- User group without ParkHere: **529**
- User group with ParkHere: **1,005**
- Utilization with ParkHere:  
**1.9 employees per parking space\***

**NO PARKING PRESSURE**

**NO WAITING LISTS**

**NO SEARCHING**

\*With overbooking of 90%, a parking space utilization of 98% to 100% is expected.
