

## Microsoft 365 Business Premium – Securing work from anywhere

As work from anywhere becomes the new normal and employees use personal devices and networks to access work data, many businesses are now taking time to assess the security of their remote work environments.

Common questions that come up in these evaluations include:

- How can we help employees stay safe from increasing phishing and ransomware attacks?
- How do we keep work files from being left behind on employee personal devices, especially if an employee leaves the company?
- How do I help ensure the devices my employees use are secure?
- Is there an easier way for employees to securely access on-premises applications?
- How do we enable a good remote desktop experience?
- How can we do all this while minimizing costs and complexity?

We'd love to talk to you about these and any other questions you may have about securing work from anywhere. The Microsoft 365 Business Premium subscription plan brings together productivity and collaboration tools with advanced security for work from anywhere environments while helping to lower your operational costs.
