# Azure Migrate Assessment

Move your data, applications, and infrastructure to Azure using Connection's Azure Migrate Assessment. Migration strategy and planning that focuses on aligning business outcomes, priorities, and technical constraints will ensure a successful migration path to Microsoft Azure. With our Azure Migrate Assessment, we can help you evaluate your existing on-premises environment and consider which infrastructure, applications, and data to migrate.

Migrate Assessment

Connection will review the following areas within your existing on-premises environment:

- **Servers and VMs**: Assess on-premises VMware VMs, Hyper-V VMs, and physical servers in preparation for migration to Azure

- **Databases**: Assess on-premises SQL Server databases for migration to Azure SQL DB, Azure SQL Managed Instance, or to Azure VMs running SQL Server

- **Web Applications**: Assess on-premises web applications for a migration to Azure App Service

Assessment Report

Connection's Azure Migrate Assessment will provide your organization with a report containing information, such as:

- **Azure Readiness**: Assesses whether on-premises machines are ready for migration to Azure

- **Azure Sizing**: Estimate the size of Azure VMs after migration

- **Dependency Visualization**: Identify cross-server dependencies and optimize strategies for moving inter-dependent servers to Azure

Migration Strategy and Statement of Work

Connection's Azure Migrate Assessment will provide your organization with a migration strategy recommendation and follow-up Statement of Work for migration activities. Using the three R's to a successful migration, we will recommend any of the following:

- **Rehost**: aka "Lift and Shift" to IaaS

- **Refactor**: migrating and leveraging Azure PaaS or SaaS in specific areas or workloads

- **Rebuild**: fully re-building the infrastructure from scratch, leaving behind existing components and leveraging Azure Native services as much as possible
