

Azure Optimization Services

For Existing Azure Environments

There are many ways to begin optimizing your current Azure environment, including reviewing your Azure architecture against Microsoft reference architectures and uncovering potential opportunities for improvement by leveraging Platform as a Service (PaaS), Automation, and/or other Azure-native tools available within the platform.

Connection offers Azure Optimization Services to help you better understand these findings, and our experts can provide recommendations on how to improve your existing Azure environment.

Azure Optimization Services

Azure Architecture Review

Connection will review the following areas within your existing Azure environment:

- Performance History
- Current Infrastructure as a Service (IaaS) Architecture
- Current Operational Management and Security Controls

Findings and Recommendations Report

After the review, Connection will provide findings and make recommendations in the following areas:

- Machine right-sizing adjustments to improve performance
- Refactoring to Azure IaaS to Azure PaaS to refocus your staff's attention to the applications and services you develop—rather than the underlying application infrastructure, middleware, and software licenses

- Configuring Azure Automation services to improve efficiency in your Azure environment
- Configuring Azure-native toolsets, such as Azure Monitor, Azure Advisor, and Azure Security Center to improve operational management of the environment
