Our M365 Copilot Readiness Assessment Team will work with stakeholders in your organization to understand the current state of data security and governance. We will provide recommendations to assist with preparing to enable Microsoft Copilot. Our team will work with you on all aspects of readiness, remediation, design, and enabling of Copilot for use across the organization. We offer flexible options, including fixed-fee project-based services and time-and-materials-based services.

M365 Copilot Readiness Assessment

The Copilot Readiness Assessment engagement is built around a modular concept and provides delivery teams a set of defined modules to review with the Client to understand overall readiness and verify requirements are met ahead of enabling Copilot. The illustration below provides a high-level overview of the mandatory activities that comprise the engagement.

The assessment deliverable provides observations and recommendations about data security and overall copilot readiness. It helps organizations understand their data posture, controls, and policies, to ensure they are best positioned to enable Copilot.
