Production and Operations Data Management

Part of Peloton's Production Data Lifecycle operating on the Peloton Platform, ProdView is the most comprehensive production and operations data management system available.

ProdView improves the way the oil & gas industry records, verifies, visualizes and reports production and operations data.

Data capture, monitoring and well surveillance
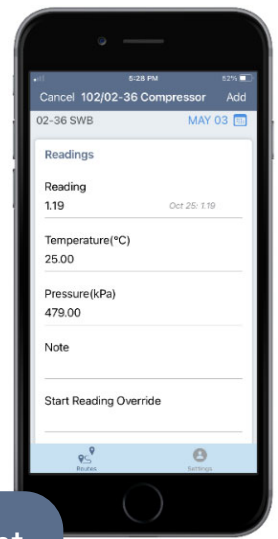

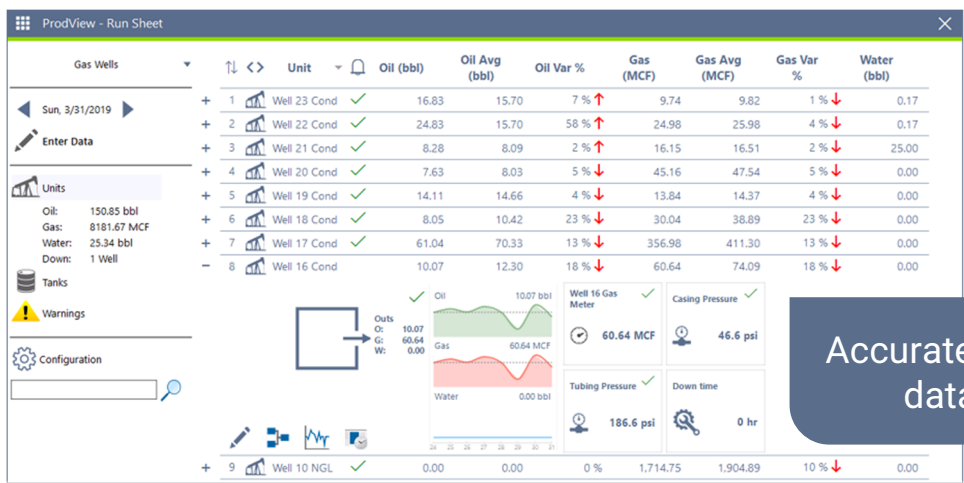

Highlights

- Mobile and web-based field data capture

- High performance visualization tools, including the Flow Network Diagram and Production Monitor

- Streamlined workflows for concise navigation with the ProdView toolbox

- Peloton Operations Center, which includes an operations dashboard, tasks, forms and emissions management tools

- Month end reconciliation, audits, allocations and regulatory reporting (50+ regulatory reports, including emissions data)

- Integration with WellView and SiteView

Field Data Capture

Easily capture your production, operations, maintenance, emissions and compliance data from the field. Use the ProdView Run Sheet to quickly visualize and enter production data, or do mobile data entry with ProdView Go.
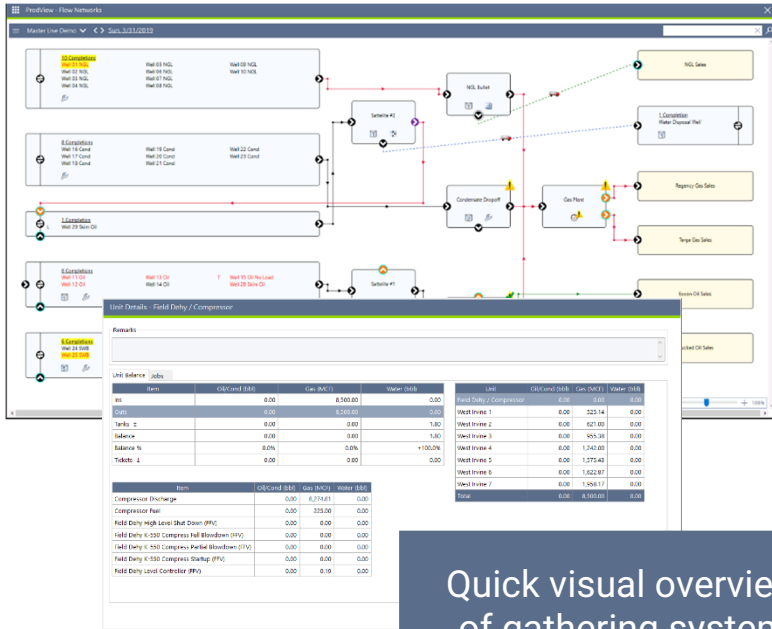

Reduce manual data entry by integrating to your existing SCADA or DCS system.

Accurate and efficient data capture

PRODVIEW

Flow Network Diagram and Allocations

ProdView's Flow Network Diagram shows the date effective physical flow of all products from the completion through the gathering system to each disposition point.

Quick visual overview of gathering system

Key Features

- Interactive view to give a visual data quality check

- Navigation to the source of data for any run ticket, tank, meter, task or attachment

- Volumetric balance at each unit and flagging of any imbalances

- Preview of allocations

- Direct maintenance from the diagram, including changing the flow path as well as adding/expiring equipment, wells and downstream facilities

Production Monitor

With ProdView's Production Monitor, you can analyze and compare well production and operations data. This well surveillance tool allows you to summarize data at the well level or any group level you designate.

Well surveillance and analysis
