

Email Encryption & Sensitivity Configuration Setup - 2 Weeks

Standardize how emails are encrypted, labeled, and access-restricted across Microsoft 365 to protect sensitive business communication.

Why This Matters?

Not All Emails Should Be Treated the Same

Sensitive information often leaves the organization via email

Inconsistent encryption creates compliance & security gaps

Users need simple, standardized protection options

Manual processes increase the risk of accidental data exposure

What We'll Deliver?

A Consistent Email Protection Framework

Configuration of sensitivity labels for email classification

Setup of Microsoft Purview Message Encryption policies

Rules for automatic encryption based on content & recipients

Watermarking, access restrictions, & external sharing controls

Documentation & guidance for end-user adoption

What You'll Walk Away With

Secure Communication Without Complexity

-  Standardized email encryption across your organization
-  Clear policies for handling confidential information
-  Reduced risk of accidental data leakage
-  Improved compliance with regulatory & internal requirements

Protect Every Sensitive Message

Ensure critical business information stays secure-inside & outside your organization.

Implement consistent, easy-to-use email encryption & sensitivity controls in just 2 weeks.
