

Microsoft Copilot for SecurityReadiness Assessment

Future Proof your Business Security with Microsoft Copilot for Security and Performanta

Performanta's Microsoft Copilot for Security Readiness Assessment is a programme that helps your organisation to prepare for deploying Microsoft Copilot for Security. As one of Microsoft's leading Microsoft Security partners, and participants in the Microsoft Copilot for Security Partner Private Preview, Performanta are helping organisations prepare for the new world of Microsoft Copilot for Security, and the huge opportunities it brings.

Microsoft Copilot for Security integrates seamlessly into your existing Microsoft ecosystem, enhancing your cybersecurity infrastructure with AI-powered capabilities. When implemented correctly, following best practices and zero trust principles, and taking advantage of Performanta's 20 years of industry security experience, Microsoft Copilot for Security will help transform your business security operations.

Phase 1 **ASSESS:**

Utilising our award-winning SAFE Platform, we will assess and evaluate your current Microsoft 365 security state to identify any gaps, and map out what activities need to happen to be prepared for the deployment of Microsoft Copilot for Security.

Phase 2 **DESIGN:**

Based on the output of these assessments and the recommendations proposed, we will design an optimisation plan for your security architecture to align strategically with Microsoft Copilot for Security. This ensures that your organisation adheres to best practices and embodies zero trust principles, as well as reducing the risk of being successfully attacked.

Phase 3 **DEPLOY:**

As a specialist Microsoft MXDR Partner with over a decade of expertise in the security field, Performanta offers its clients a wealth of knowledge through a team of seasoned security experts. These professionals are equipped to bridge any gaps in your infrastructure and security solutions, aiding in transforming your business to operate efficiently and adapt to new cutting-edge AI technologies.
