

Pexip for Microsoft Teams

Pexip Cloud Video Interop (CVI) for Microsoft Teams enables professional SIP and H.323 video conferencing systems to join Microsoft Teams meetings with full video, audio and content sharing capabilities. Pexip ensures a native workflow where users and meeting hosts benefit from the full Teams workflow, regardless of how participants join the meeting.

Created for Teams

Pexip for Microsoft Teams has been developed in close cooperation with Microsoft. It enables any video conferencing system to join Microsoft Teams meetings.

Native workflows

Pexip Cloud Video Interop for Microsoft Teams natively integrates so that users never leave the application, and benefit from the full Teams experience.

Drives the cloud journey

Pexip replaces or co-exists with existing video conferencing infrastructure, allowing customers to move IT workloads to the cloud at their own pace.

Simplifies migration

A single application for Microsoft Teams and Skype for Business video interoperability speeds up migration and enables organizations to migrate effortlessly from one solution to the other.

As a dedicated application ...

- Application on customer network, enables on-net integrations
- Application can run in specific Azure account or region, or even parts of platform can run on-premises
- Enables customizations and business-centric custom workflows
- Provides local control and management, and is perfect for those with specific compliance requirements

... or as-a-service

- Out-of-the-box fully managed Pexip service
- Reduced time to production—provides instant Cloud Video Interop capabilities
- Enables registration of video conferencing endpoints on global cloud service for call control, management, phone book and more
- Allows migration from on-premises video conferencing infrastructure
