PAIRING HUMANS AND TECHNOLOGY
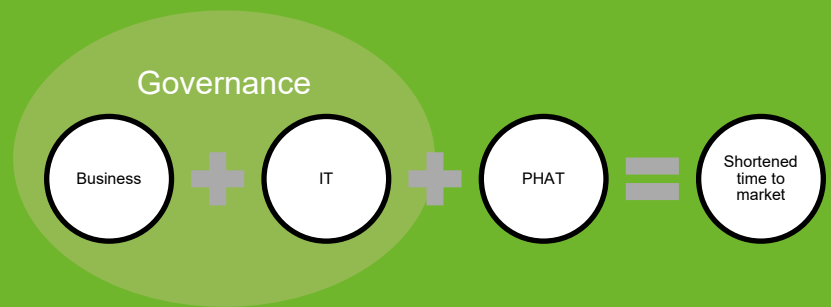

PHATaccelerate – The Platform for Accelerating Digital Transformation

With our PHATaccelerate approach, we bring together the advantages of our many years of expertise with Microsoft, Development and our adoption and change approach. We accompany companies that are in the digital transformation and have the vision to offer their processes with individual applications and applications on Microsoft 365 and in particular in Microsoft Teams sustainably.

We demonstrate the potential of Microsoft Teams-as-a-Platform, support relevant governance to create organizational requirements and make our customers low-code-ready.We act as a bridge between IT, business and the users, according to our mission: PAIRING HUMANS AND TECHNOLOGY.

PHATaccelerate - Our approach and added value

In a discovery workshop, we work together with the client and the various stakeholders (e.g. business, IT or executive board) to determine the governance requirements along jointly identified business use-cases. We speak the language of business and IT and connect the needs of all stakeholders. Our experience enables us to shorten the time-to-market of our own apps and to bring speed to process changes or innovations. Translated with www.DeepL.com/Translator (free version)

Governance

Business + IT + PHAT = Shortened time to market

Exploration → Framing → Community building → Self-organization → Benefit, learn, improve

Together we develop a vision for the (power platform) governance and application architecture. We accompany all phases of the implementation with communication and consulting measures - from the exploration workshop to the piloting to the roll-out of the first applications - so that the process, but also the users are in focus and shape the adoption and the change.
