

PROTECTING OUR FUTURE: SUSTAINABILITY SMART SOLUTIONS READINESS ASSESSMENT

The UK government has committed to the United Nations' Sustainable Development Goals (SDGs) and is encouraging local government and public sector organisations to support delivery against two thirds of the targets. As your services impact on both the environmental and social challenges faced by the UK, you have a crucial role in helping to achieve these targets by 2030.

To support these goals, you must change behaviours within your organisation, and technology and data solutions are vital in helping you deliver this.

The assessment

Our Smart Solutions Readiness Assessment empowers you to extract the information you need to futureproof your IT infrastructure and align to your organisation's ways of working, sustainability strategy, and low carbon action plan.

This programme has been developed to be non-invasive and is compliant with ISO 14001, 9001, and 27001.

The assessment covers three key areas, which enable us to develop an action plan and recommend smart IT solutions to meet your organisational and sustainability objectives:

- Creating or reviewing your sustainability vision
- Gathering information about your processes
- Assessing your use of technology and IT infrastructure

Following completion of the assessment, you will receive a documented environmental assessment of your IT Infrastructure, with recommendations, including technology portfolio, working practices and carbon, and economic justification of savings and benefits.

WHAT TO EXPECT

 1	Sustainability envisioning session: exploring your sustainability vision, environmental governance, and use of cloud technology IT service and key stakeholders 90 minutes	 2	Technology discovery workshop: exploring your infrastructure and systems set up IT service One day (8 hours)
