## How eLoom helps

### Transform data into usable information

Easily access and analyze all of your clinical, operational, and financial data through hundreds of predesigned reports and dashboards or use the powerful analytics engine to build your own.

01

### Translate information into insight and knowledge

Produce reports with the click of a button, understand what is happening across your entire organization, and share key trends and information with your team and stakeholders.

02

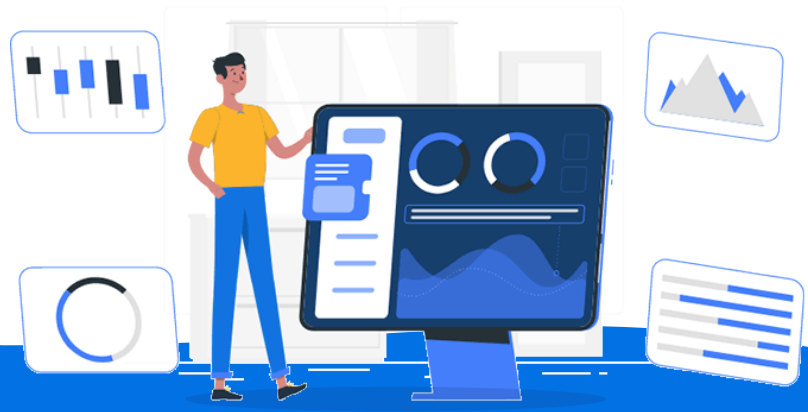

### Turn knowledge into action

Deliver real-time actionable insight to improve quality and effectiveness of clinical services, increase team productivity, and maximize revenue.

03

# About the Product

## Data Transformation Processor

eLoom connects to your EHR and other data sources, extracts, cleans, and reorganizes the data, and sends it to the cloud-based service or on-premise server of your choice. The result is an integrated data set that is optimized for analysis and reporting.

## Pre-Designed Reports and Dashboards

eLoom contains over one hundred standard reports on clinical, operational, and financial data designed for internal management as well as regulatory reporting. More reports are constantly being added to the library. All data can then be exported, printed, emailed, or uploaded to other systems.

## Custom Report Builder

If the pre-designed reports don't meet your need, build your own! You can create custom tables, reports, and dashboards for any purpose or audience. Your custom reports can be saved, shared, or edited so you can continue to meet your ever-changing reporting and analysis needs.

Have complete ownership, control, and visibility of your eCW data — have full confidence in, and power over your data.

Get immediate results with the click of a button — no more complex and time consuming reporting processes.

All reports are customizable, flexible, and dynamic — don't be stuck with rigid one-size-fits-none reports.
