Cloud Analytics Proof of Concept

Verify your business case for moving to Azure with a working cloud-hosted analytics solution.

Need a quick solution for demonstration purposes or to confirm a specific use case?

This cloud analytics proof of concept engagement starting at **5 days** duration will focus on any aspect of your data estate, helping you build on your understandings of cloud concepts and offerings, so you can :

- Identify potential future value of enhancing your data platform
- Define your path to cloud-native data analytics
- Showcase the functionality of the cloud to your stakeholders, using a proof of concept with data they know

Why Cloud Analytics?

Many organisations are considering the future of their on-premise data systems, given the overhead in maintaining and securing them. The prospect of a cloud-hosted solution brings a number of benefits that will appeal to both those who use and those who manage these on-premises systems.

Moving your data analytics platform to the cloud has benefits far beyond simply reducing the overhead of managing an on-premises system. There is significant opportunity for competitive advantage due to the scalability, functionality and sheer analytical power on offer from a cloud-native solution.

How can we help?

We believe that a short Proof of Concept exercise, based on any system or area of your choosing, will help address any concern or reservation you might have with a cloud-native data analytics solution. Alongside this, we aim to introduce to you some of the numerous advantages offered by this technology.

Our Data Analytics Consultants will architect, cost and deliver a solution to help you identify the future potential of your data platform.

What do we offer?

Discovery: Review of your requirements for cloud analytics and appraisal of existing candidate systems you may be considering moving to the cloud.

Design: Architectural proposals for discussion and approval, costing and implementation details.

Delivery: Proof of Concept system developed and hosted in the cloud, demonstrated to stakeholders.

Review: Together we'll measure the success of the project and devise your next steps.

From **£3750**

Why work with us?

We work closely with you to determine exactly what your current and future needs are and how we can help in the most cost-effective manner.

Our broad and deep understanding of data analytics allows us to offer a flexible and informed service.

Our client relationships are open, honest and equal.

We believe this is the real key to successful engagements.
