Agenda

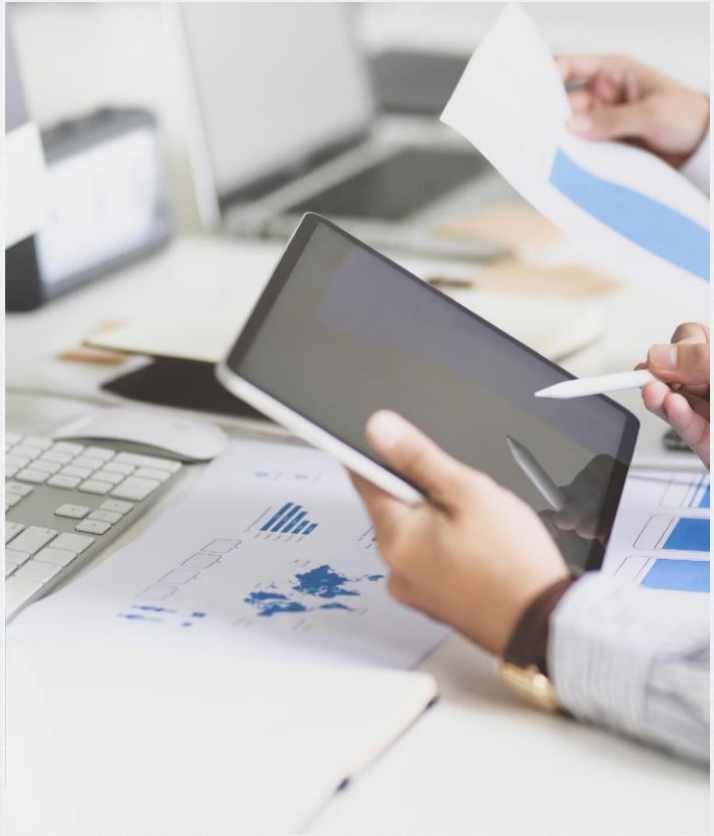
Our products

Oction+
Automation Framework

Fedele
Source of Truth for automation

iCollect
Any-to-any Incident management

Igory
Intelligent Remediation system



Benefits

OcTion+

Powerfull Platform

One console release all full potentiality of automation.
Simplest, intuitive, agnostic & reliable software solution

34%
Operational Efficiency

66%
Acelerate TTM

78%
Error Reductions

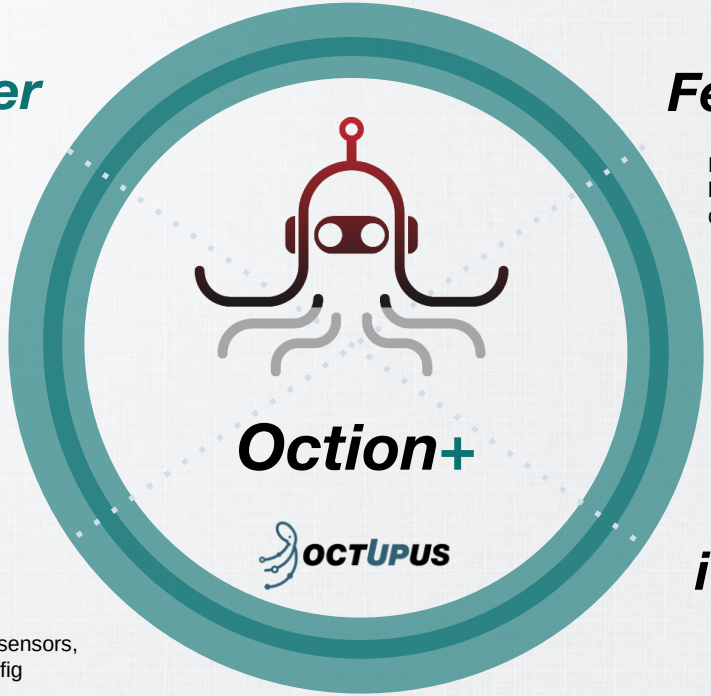
OctUPus automation environment – Octionꟷ

Untangler

Octupus Untangler for automation data engineer, science and analytics

Any Vendor or Platform



Fedele

QA team

Maintained by QA team, Fedele becomes the only source of data that feeds Octionꟷ

Jira Software
servicenow
bmc

Any source of data

iGory

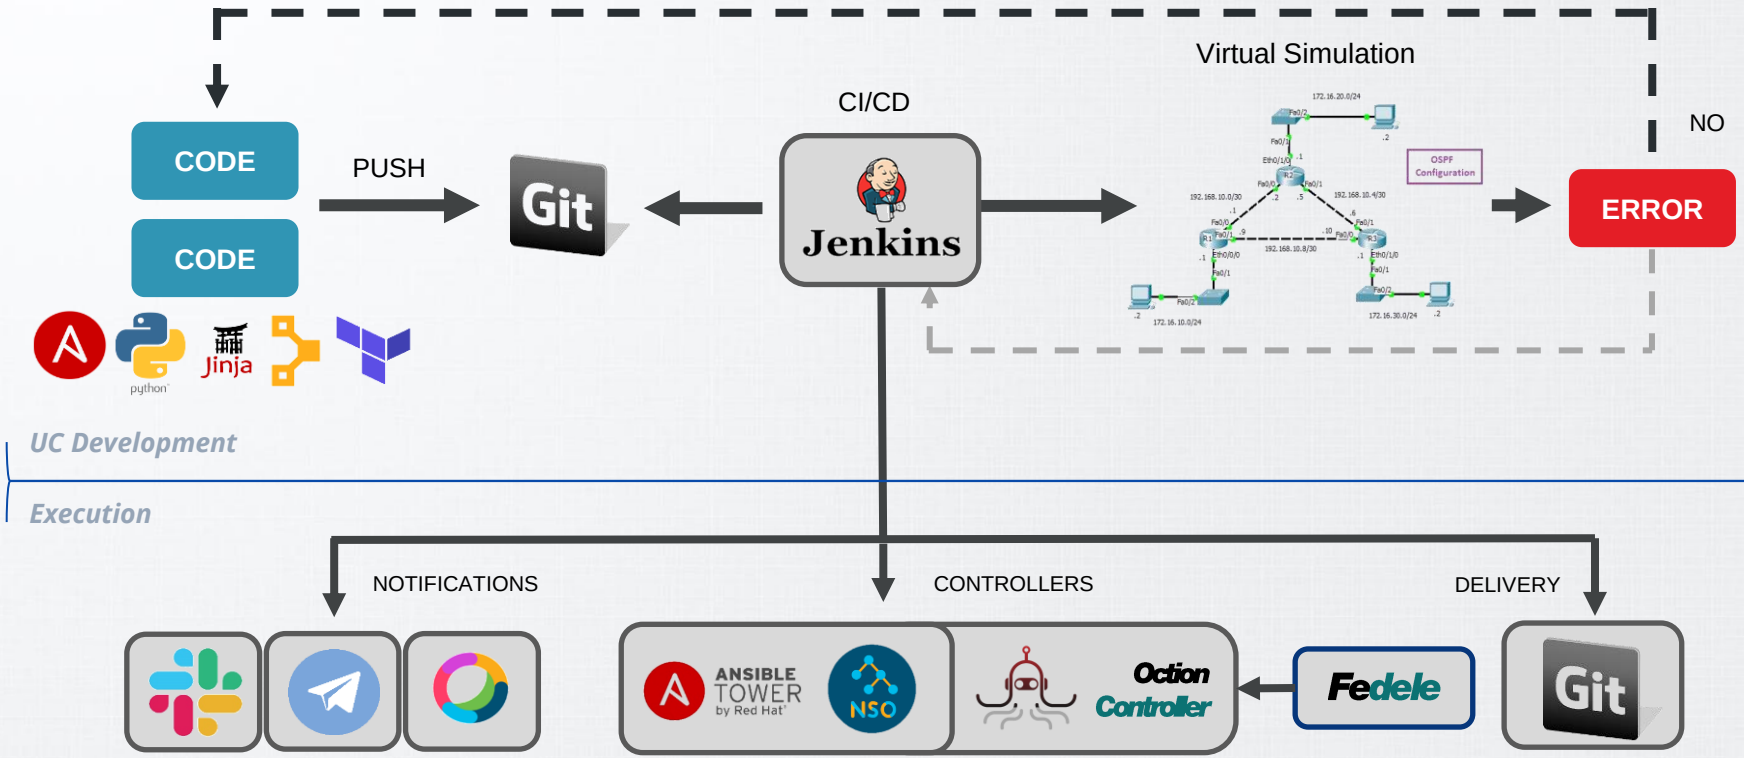
iGory receives events from sensors, apply rules and triggers config changes actions in Octionꟷ

iCollect

iCollect receives any type of alerts from any platform and open cases on any incident manager

ZABBIX
Nagios®
Grafana
Prometheus
sensu
The open source monitoring framework.

Octionn+ *Automation Arquitectura*



Fedele is a Source of Truth system that stores Source of Records. Created and validated by Quality assurance team, Fedele's Source of Records contains all the information (network, infrastructure, billing, etc.) to securely and uniquely feeds any Automation Tool or Business application.

OCTUPUS
BECOME DIGITAL TOGETHER

Fedele

Fedele

Source of Truth for Automation

Key Benefits

- Single point of Infra information
- Inventory of logical & fisical resources
- Open Source database Architecture
- Full integration via API

QA team

Engineering team create, maintains and approves the SoT

Eco System

CRM
Credentials
Billing
NSO DB
Others

Other systems can be an input to the SoT if required

HTTP API
Socket
SSH

REST API

Controllers

Octions Controllers take data from Fedele and apply the changes to the infra

QA team can create SoT models by entering data manually, Importing from other data structures (i.e.: CSV) or gathering data from Eco System

iCollect is another open API application developed by OctUPus. i**Collect** receives or scans the incidents on any API-capable platform (SDN / SNMP), customizes an incident log, opens a case on any Incident Manager, and reports all stakeholders about the incident.

OCTUPUS

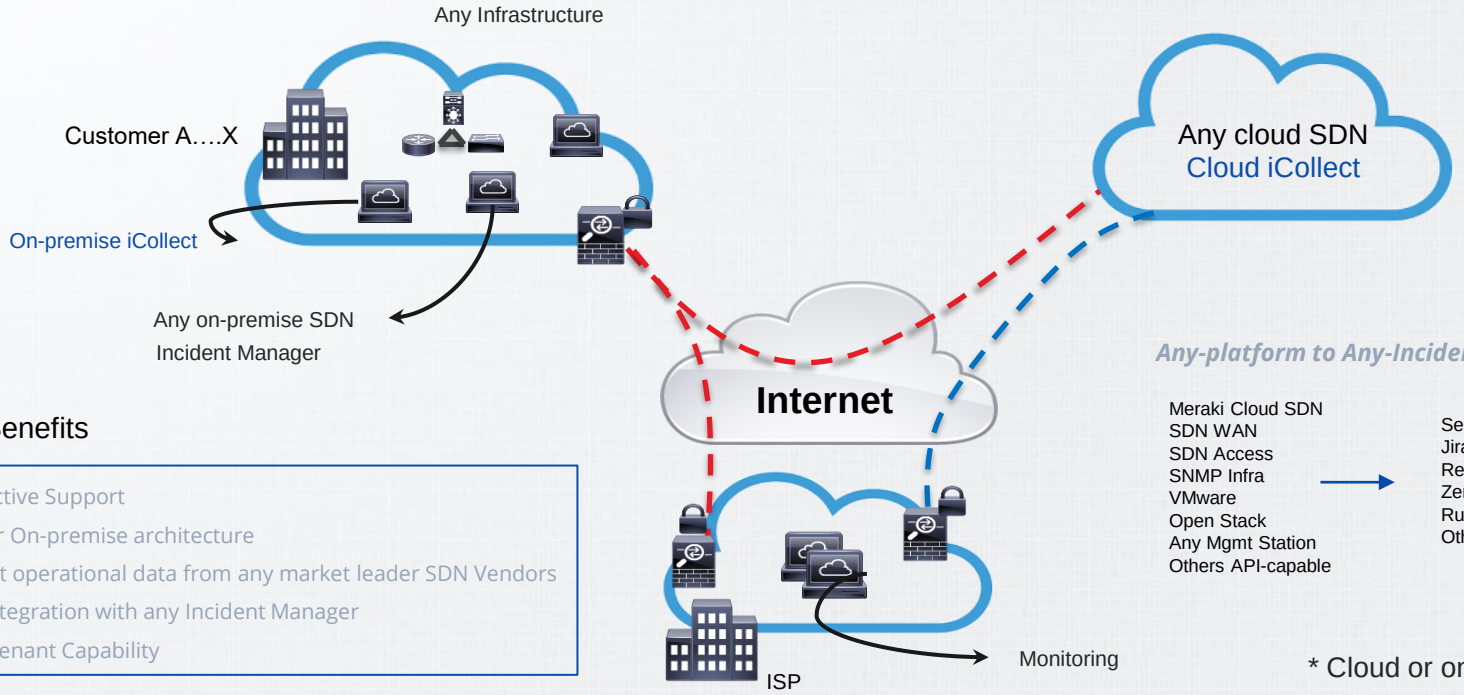
iCollect

iCollect

Any-platform to Any-Incident manager



Key Benefits

- Pro-active Support
- SAS or On-premise architecture
- Collect operational data from any market leader SDN Vendors
- Full integration with any Incident Manager
- Multitenant Capability

Any-platform to Any-Incident manager

Meraki Cloud SDN
SDN WAN
SDN Access
SNMP Infra
VMware
Open Stack
Any Mgmt Station
Others API-capable

Igory

Igory

Events based remediation system

Key Benefits

- Automatic detect configuration changes
- Call to action in order to mitigate errors
- Complete operational activity tracking
- Full integration with any Mangement Platform

Sensors, Rules and Actions developed per Use Case. Integrated to Octionn+ workflow manager

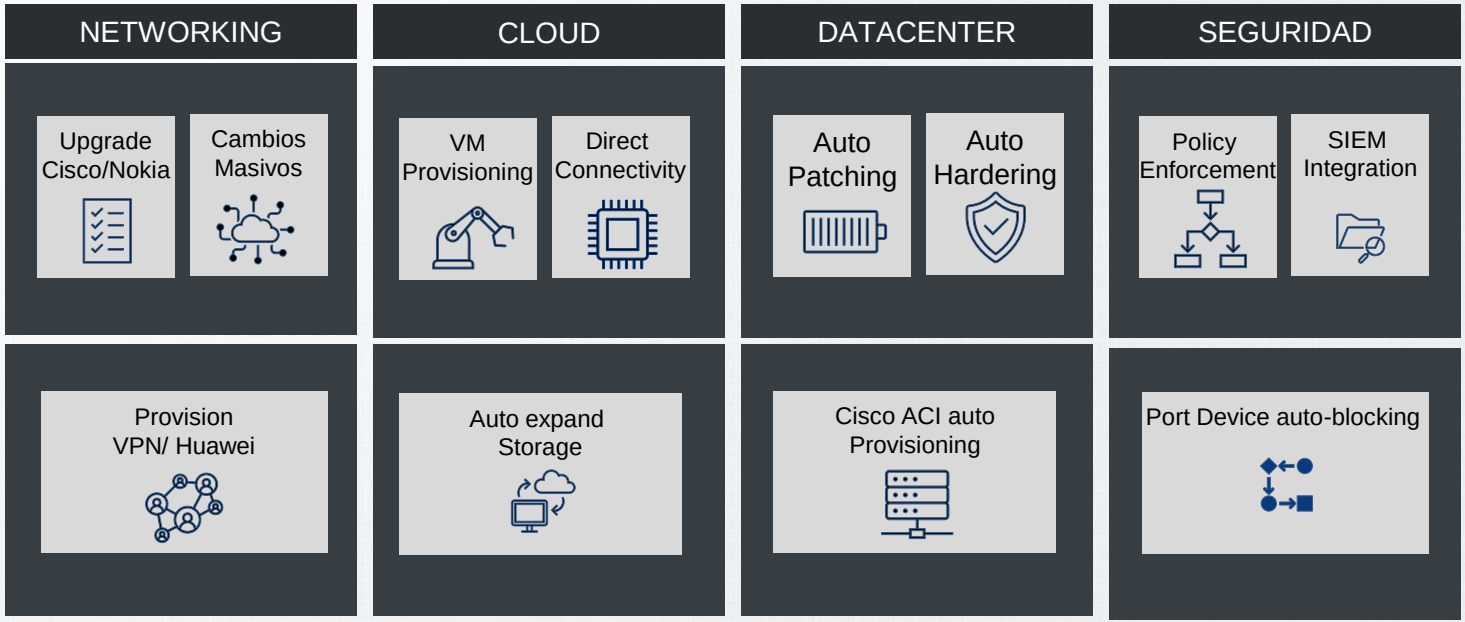
Uses Cases

Casos de Uso

Ejemplos a explorar...



Octon+ Use Cases

- Massive Cisco IOS update
- Massive Nokia SROS update
- SDN Cisco ACI automation
- BGP Route Reflector
- MPLS-L3-VPN, BGP RR & OSPF to CPEs
- MPLS-L3-VPN, BGP RR & BGP to CPEs
- MPLS-L3-VPN, BGP RR & BGP-OSPF to CPEs
- IPAM & DCIM population after network scanning
- Config Compliance
- VRF Assessment NSO Service
- Legacy Datacenter Provisioning
- Azure Resource Group Provisioning

Thanks!
