

VIDEO CONFERENCING SOLUTIONS FOR MICROSOFT TEAMS

Many organizations use both Microsoft Teams or Skype for Business while still wanting to manage and utilize their professional meeting room systems (SIP/H.323 devices). It can be difficult for users to understand and remember how to join workflows for the different hardware setups and meeting types.

Poly Cloud Video Interoperability simplifies collaboration across all of your meeting room systems, and integrates your video conferencing infrastructure with Microsoft Teams.

SECURITY AND DATA CONTROL

Secure and private meetings with full control over all meeting data thanks to flexible deployment options ranging from on-premises to cloud service.

CUSTOMIZABLE

With Poly, you can custom brand your welcome screen and domain so both employees and guests know they're in the right place.

MAINTAIN NATIVE MICROSOFT TEAMS WORKFLOW

Multi-platform unification simplifies meeting experiences, integrating into the Microsoft Teams workflow. Scheduling meetings from Microsoft Teams or Outlook automatically inserts video conferencing dial-in details.

Poly Cloud Video Interoperability is part of the CloudConnect package which encompasses everything you need to connect your video conferencing rooms and make hosting and joining video meetings a pain-free experience.
