by PLEXICUS

## ASPM

**APPLICATION SECURITY POSTURE MANAGEMENT** 

ELEVATING CYBERSECURITY IN THE SOFTWARE SUPPLY CHAIN

## KEY BENEFITS

Al-driven vulnerability detection and remediation

Seamless integration with development tools

Drastic reduction in human intervention and cost (95%)

Real-time continuous protection

#### by PLEXICUS

#### APPLICATION SECURITY MANAGEMENT PLATFORM

Al-Powered Vulnerability Management & Remediation Platform

COVULOR is a Continuous
Vulnerability Orchestrator
designed to provide
comprehensive protection
across the entire software
supply chain. By leveraging
advanced AI, COVULOR
integrates seamlessly into your
existing tools and infrastructure
to identify, prioritize, and
remediate vulnerabilities
automatically.

## KEY FEATURES

#### AUTOMATED VULNERABILITY MANAGEMENT

- Identifies, prioritizes, and remediates vulnerabilities across the software supply chain.
- Automates
   vulnerability detection,
   prioritization and
   remediation.

#### SHIFT LEFT SECURITY

- Integrates security early in the development lifecycle.
- Reduces
   vulnerabilities before
   reaching production,
   lowering overall costs.

#### SECURITY COVERAGE

- Covers SAST, Open-Source Security (SCA), Infrastructure as Code (IaC), and License Compliance.
- Ensures Cloud Security Posture Management (CSPM) and full Software Bill of Materials (SBOM) management.

#### AI-POWERED REMEDIATION

- Automatically generates and applies security fixes, reducing exposure windows.
- One-click fixes directly from source code management systems (e.g., Git, GitHub, GitLab).

#### COMPLIANCE

 Proprietary metric that prioritizes vulnerabilities based on real-world impact, public data, and asset criticality.

#### COST OPTIMIZATION

- Reduces operational costs by automating up to 95% of vulnerability management tasks.
- Minimizes response times and reallocates human resources to strategic activities.

## USE CASES

# COMPREHENSIVE SUPPLY CHAIN PROTECTION

Secures the entire software supply chain from code to deployment, ensuring protection against threats in every phase.

### AUTOMATED LICENSE COMPLIANCE

# REAL-TIME VULNERABILITY REMEDIATION

Ensures continuous protection by remediating vulnerabilities as they emerge, keeping systems secure against evolving threats.

#### PRODUCT SPECIFICATIONS

### PRODUCT SPECIFICATIONS

#### PLATFORM COMPATIBILITY

Integrates with all major CI/CD platforms and development tools.

#### **AI MODEL**

Deep learning and large language models (LLMs) for threat intelligence.

#### **AUTOMATION MODEL**

Up to 95% reduction in human intervention through automated vulnerability management and remediation.

#### **INTEGRATION METHODS**

API-based, tool-agnostic integration with Open Source and Commercial tools.

## HOW IT WORKS

### 1 DETECTION

COVULOR scans your codebase, infrastructure, and open-source components to identify vulnerabilities.

### 2 PRIORITIZATION

Uses the proprietary "Damage Potential" metric to prioritize vulnerabilities based on real-world risk.

### 3 REMEDIATION

Automatically generates playbooks and applies code fixes with one-click integration into source code management systems.

# **CONTINUOUS**MONITORING

Automatically generates and applies code fixes with one-click integration into source code management systems, ensuring continuous monitoring and rapid remediation of vulnerabilities. COST SAVINGS

REDUCTION IN

automates repetitive tasks, allowing your team to focus on strategic objectives.

#### **MINIMIZED RESPONSE TIMES**

Immediate remediation reduces the time to resolve security issues.

### OPTIMIZED RESOURCE ALLOCATION

Focuses your resources on highpriority vulnerabilities to maximize efficiency and reduce overall costs. NEXT STEPS
