

Copilot Workshops & Implementation

Overview

Generative AI is reshaping how organizations work, but enabling it securely and effectively takes more than simply switching it on. AI assistants for Microsoft 365 tools—such as Teams, Word, Excel, PowerPoint, and Outlook—can help employees draft, summarize, analyze, and create at remarkable speed.

To gain the full benefit while protecting sensitive information, organizations need a clear adoption strategy, strong governance, and focused training.

POA Solutions provides end-to-end services: readiness assessments, interactive workshops, secure configuration, pilot deployments, and enterprise rollout—so you capture productivity gains while maintaining compliance and data security.

Vision

- AI-Driven Productivity**
Natural-language prompts enable employees to generate documents, presentations, and data insights quickly.
- Responsible & Secure**
Our approach aligns with industry best practices for privacy, compliance, and data-loss prevention inside your Microsoft 365 tenant.
- Business Transformation**
Embedding generative AI into daily workflows reduces manual effort, shortens project timelines, and encourages innovation across teams.

Key Workshop & Implementation Services

Service Area	What It Delivers
Readiness & ROI Assessment	Review your Microsoft 365 environment, security posture, licensing, and governance to confirm AI readiness and provide a business-case report.
Strategy & Use-Case Design	Identify high-value scenarios (e.g., sales proposals, financial analysis, marketing content) and create a phased adoption roadmap.
Pilot Deployment	Configure Copilot features for a select group. Validate data security, compliance, and performance while collecting feedback.

Service Area	What It Delivers
Workshops & Training	Interactive sessions for executives, IT teams, and end users covering prompt techniques, best practices, and responsible AI usage.
Tenant & Security Configuration	Fine-tune Microsoft 365 security controls, sensitivity labels, and conditional access to safeguard confidential data.
Enterprise Rollout & Change Management	Full deployment across departments, adoption campaigns, and ongoing optimization.

Implementation Highlights

- Integration with Teams, Word, Excel, PowerPoint, Outlook, and other Microsoft 365 apps.
- Optional Power Platform and custom business process automation.
- Advanced analytics using Microsoft Graph data for improved context and search.
- Secure connectors to approved third-party data sources.

Packages

Package	What's Included	Best For
Essentials	Readiness assessment, one executive workshop, pilot deployment for a small team.	Small businesses starting with AI.
Pro	Essentials plus multi-department pilot, advanced security configuration, and admin training.	Mid-size organizations seeking structured rollout.
Enterprise	Full implementation, custom integrations, Power Platform automation, and ongoing optimization.	Large enterprises or regulated industries.

Industries We Serve

Healthcare • Financial Services • Manufacturing • Education • Professional Services • Retail & Consumer Goods • Public Sector

Why POA Solutions

- Recognized Microsoft Solutions Partner for Modern Work and Security.
 - Early experience delivering Copilot pilots across diverse industries.
 - Deep expertise in Microsoft 365 security, compliance, and Zero-Trust design.
 - Complete service journey: Assessment → Workshop → Pilot → Enterprise Rollout → Support.
-

Business Value

- Productivity Boost – Automate routine tasks and speed up content creation.
 - Secure Innovation – Maintain privacy and meet compliance requirements.
 - Faster ROI – Structured workshops and pilots shorten time-to-value.
 - Change Management – Drive adoption with tailored training and executive alignment.
-

Call to Action
