

CFO Cockpit

As a CFO are you able to?

- Drive integration of information across the enterprise?
- Measure and monitor business performance?
- Provide inputs to organization strategy?
- Execute continuous finance process improvements?
- Support / manage / mitigate enterprise risk?
- Drive enterprise function cost reduction?
- Accurately budget and forecast?

What do you need?

- As the CFO of your company, your organization relies on you for more than just numbers. Yes, spreadsheets and financial reports are the hallmarks of your profession. But what about business intelligence and forecasting?
- What they need to boost performance is a financial reporting dashboard to aggregate data from different business units and provide insights into alternative strategies. Once various data sets are connected together visually, patterns emerge, extrapolation is possible, and the future is less murky.

What we have to offer?

- The dashboards should provide a quick view of identified KPI's and other critical information to enable informed decision-making
- The dashboard should help the CFO and his organization to reduce risks and help improve profitability
- It should provide a one glance view of the top customers / products / geographies of the company
- For better business control and maneuvering it is mandatory to have data at fingertips

CFO Cockpit

CFO Cockpit allows you to have better business control and maneuvering as you have access to the right kind of metrics and views at your fingertips.

360-Degree View

Our solution lead the way in helping the organization create 360-degree views of key entities like customers, products, suppliers, employees, partners, and capital resources.

Single Version of Truth

CFO Cockpit standardizes financial information throughout the organization and harmonizes it with detailed transaction data used by the business. This "single version of truth" liberates the finance department to focus on value-added activities that drive business performance.

Self-Service Reporting

Use the dynamic report creation capabilities of BI tools and reduce reliance on your IT team to create interactive and custom, analytics reports by yourself. Take the help of BI assistant to answer queries.

Analytic Output

- Financial Reports.
- Analyses and Models.
- Subject Area metrics
- Predictions
- Profit & Risk Analysis
