

TIC Modernization

As a federal agency do you want to remove barriers to Cloud and modern technology adoption? Are you trying to find out how your agency will be able to meet OMB Trusted Internet Connections (TIC) initiative as part of the Cloud Smart strategy? Do you want to use modern security capabilities to access cloud services while maintaining cybersecurity? Do you want to know more on how we helped U.S. Small Business Administration (SBA) successfully complete their TIC modernization Pilot in 90 days?

Practical Solutions, Inc. (PSI) is offering a one-hour briefing on how federal agencies can use Microsoft cloud-based security tools to give them a singular view into all of their devices wherever they are on-prem or in the cloud. We will show how agencies can give the Department of Homeland Security (which runs the TIC program) the data it needs without using a Managed Trusted Internet Protocol Service (MTIPS) provider services. We will show how the Microsoft product allowed SBA to use dual homing to give DHS access to its data.

We will show how agencies can meet the intent of the TIC and remove it as an obstacle to move forward with cloud adoption.
