

# Power Platform Kickstarter

Make your **first steps** with the Microsoft Power Platform and **verify the value**

## Power Platform Kickstarter: the accelerator of your digital transformation

Business applications that contribute to efficient working and rapid changes are in high demand. In practice, this still poses quite a challenge in organizational terms. With the Power Platform, Microsoft offers a place where your entire organization can start its digital transformation journey. Predica can make your organization develop business apps and help govern the whole process.

### Challenges

- Defining the boundary between IT and the business
- Enabling citizen developers and driving tool adoption
- Redesigning poorly performing apps or processes
- Governing a platform

### Ideal solution

- Using the Microsoft Power Platform, an employee with no programming skills builds an app within 14 days and continues to develop and deploy numerous apps in the next quarter.

### Desired outcomes

- Fostering a culture of innovation and eliminating the IT app backlog by combining a formal citizen developer initiative with the right low-code/no-code RPA solution and a well-managed CoE.
- Result: massive impact on business productivity and IT efficiency.

# Power Platform Kickstarter

Ready-to-use enterprise case scenarios with Power Apps. Make the platform a part of the IT strategy of your business units and the whole organization.

## Envisioning

Power Platform ideation: enterprise examples, environment usability, measurable benefits.

## Solution

Power Platform holistic recommendation based on customer pains and gains with investment KPIs.

## Strategy

Power Platform tenants to be used and governed properly, according to your policies, goals, and environment.

# Customer success: an energy holding company in Poland

## Delivery Model

Almost all companies today, especially the big ones, suffer from insufficient resources in IT teams that cannot immediately address new business needs. The Polish energy holding company's response to that was the Power Apps Platform adoption, where businesspeople could quickly and easily develop applications by themselves using a no-code solution with support from an IT specialist or a partner only when needed.

### One common standard for security and compliance

- 20 business scenarios deployed by customer resources with minimal support from Predica's Advisors within the first month.

### Establishing the governance of citizen developers

- IT specialists can focus on strategic projects and governance. A visible reduction in the number of requests raised with the IT department.

### Training 50 Power Apps developers (business users)

- A backlog of 50 new scenarios gathered by employees. 30 scenarios with high business impact assessment.

# Predica's Power Platform Kickstarter

With the Microsoft Power Platform, you can deliver an excellent user experience and increase the business value inside your company.

Driving adoption and cultivating a low-code culture is more than simply implementing technology features. Technology can assist an organization in making the greatest impact, but a healthy low-code culture involves a lot of consideration across the spectrum of people, processes, and technology.

## Power App Solution

### In-A-Day

Microsoft MVP solution for a sample real-life challenge to show how it works and how to build the app.

## Power Platform

### Center of Excellence

An alignment of IT specialists, business professionals, and citizen developers to reach the shortest time-to-value enterprise solutions in a secure and managed environment with one-click actions and common standards.

## Adoption and Change

### Management

An engaged organization with skilled users, a platform and business strategies alignment, achieved goals and benefits.

# Channel partner success: Power Platform adoption in the biggest Polish energy company

Almost all companies today, especially the big ones, suffer from insufficient resources in IT teams that cannot immediately address new business needs. The Polish energy holding company's response to that was the Power Apps Platform adoption, where businesspeople could quickly and easily develop applications by themselves using a no-code solution with support from an IT specialist or a partner only when needed.

## Fast time-to-value for new business applications

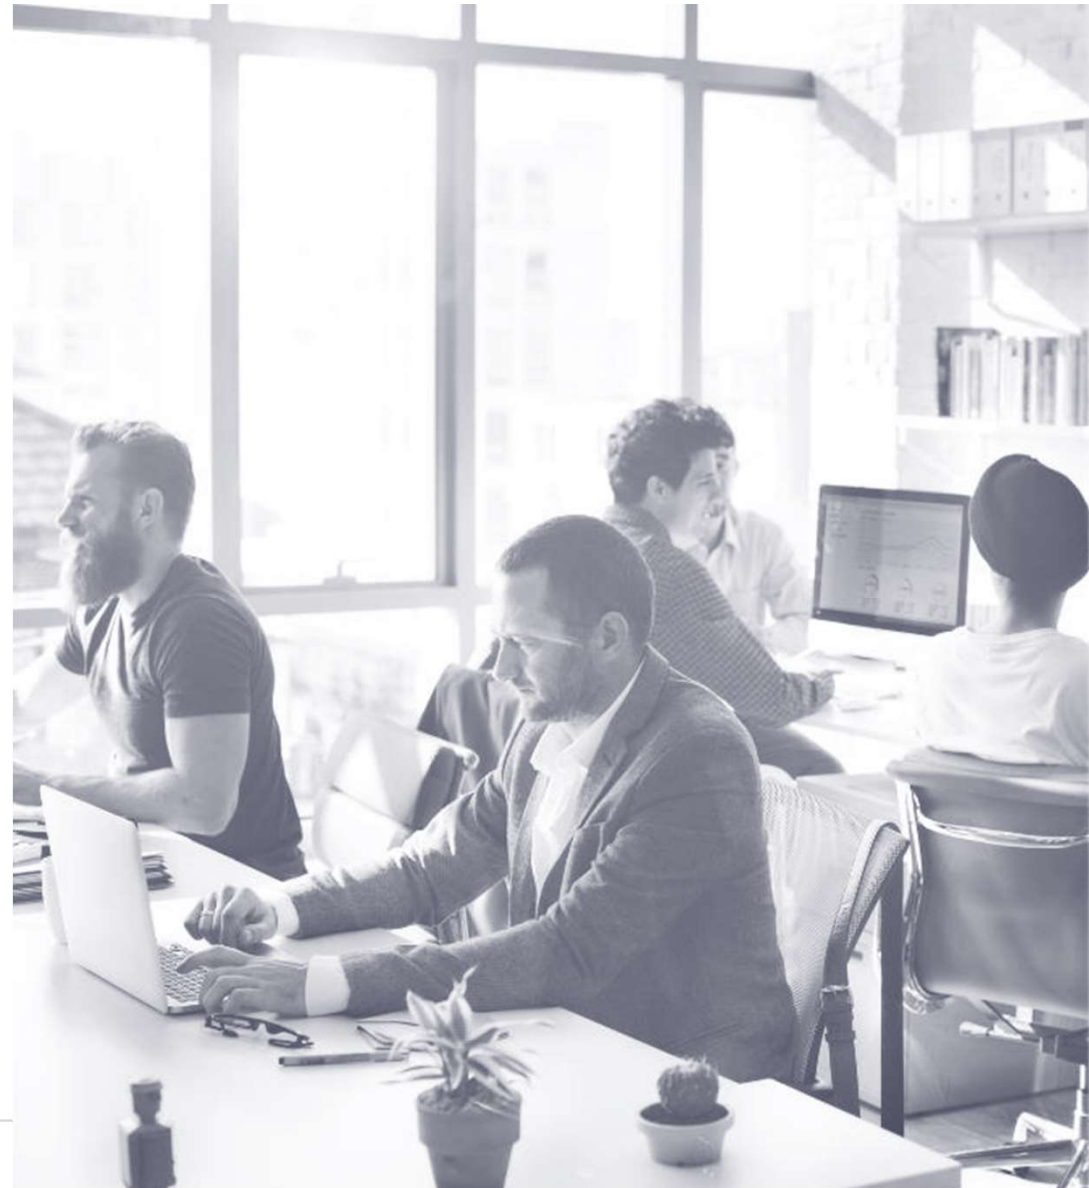

- 20 business scenarios deployed by customer resources with minimal support from Predica's Advisors within the first month.

## IT department is relieved

- IT specialists can focus on strategic projects and governance. A visible reduction in the number of requests raised with the IT department.

## Establishing the governance of citizen developers

- A backlog of 50 new scenarios gathered by employees. 30 scenarios with high business impact assessment.
