

Backup and Recovery

Use Cases

1

SQL Servers: configure SQL Server to automatically backup to Azure

2

Windows Server: configure automatic backup to Azure via Backup Schedule Wizard or PowerShell `cmdlet`

3

Virtual Machines: store VM configurations, VMM data, and VHDs to Azure via Microsoft System Center Data Protection Manager (DPM)

4

Backup Datacenter: Azure Site Recovery replicates critical services in the cloud to get you up and running in minutes (VMWare in preview!)
