PreVeil for CMMC 2.0 Compliance

The Department of Defense's *Cybersecurity Maturity Model Certification (CMMC) framework* mandates independent certification of contractors' cybersecurity maturity levels. CMMC 2.0 Level 2 focuses on the protection of CUI (Controlled Unclassified Information). There is no path to CMMC 2.0 Level 2 compliance with CUI stored or shared using commercial systems. Instead, hundreds of defense contractors—including many small- to medium-size companies—use PreVeil to comply with CMMC, DFARS, NIST and ITAR due to its high security, low cost, simple deployment, and ease of use.

Three key steps to CMMC 2.0 Level 2 certification: How PreVeil can help

First, adopt a secure platform for exchanging CUI. PreVeil is an end-to-end encrypted email and file sharing system. PreVeil protects CUI at every point in an organization's communications and collaboration cycle, including its *supply chain*. Key features include:

- PreVeil **EMAIL** and **DRIVE** comply with virtually all CMMC 2.0 Level 2 mandates related to communication and storage of CUI, as well as with *NIST 800-171*, *DFARS 252.204-7012*, and *ITAR 120.54*.

- PreVeil implements *Zero Trust* principles and so offers both compliance and fundamentally better cybersecurity than legacy, perimeter defense systems

- PreVeil is FedRAMP Baseline Moderate equivalent, stores all CUI on FedRAMP High AWS GovCloud, meets DFARS 252.204.7012(c)-(g) and uses FIPS 140-2 validated cryptographic modules for encryption

Second, develop a robust SSP (System Security Plan). An SSP is a prerequisite for any DoD work. To help get this essential task done, PreVeil has commissioned the creation of an SSP template for companies that deploy its platform. The practices section of the SSP template is based on the 110 CMMC 2.0 Level 2 controls and has been filled in to reflect PreVeil's capabilities and the requirements it meets. The PreVeil template will dramatically accelerate completion of your SSP.

Third, partner with experts who can smooth your path to CMMC compliance. While PreVeil Drive and Email support compliance with virtually all CMMC 2.0 Level 2 mandates related to communication and storage of CUI, other mandates need to be addressed too. To facilitate that, PreVeil has partnered with a wide range of organizations and experts certified by the CMMC-AB (CMMC Accreditation Body). Coordinated access to this specialized partner community will ease your path to compliance.

PreVeil: Simple and affordable by design

- PreVeil **EMAIL** and **DRIVE** deploy easily as an overlay system, with no impact on existing file and email servers, making *deployment and configuration simple and inexpensive.* Deployment can be completed in a matter of hours.

- PreVeil is *easy for users to adopt* because it works with the tools they already use: PreVeil Drive's file sharing works like OneDrive and is integrated with Windows File Explorer and Mac Finder. PreVeil Email seamlessly integrates with Outlook, Gmail, or Apple Mail clients. Users can keep their regular email address.

- Given its ease of deployment and use, PreVeil is *cost effective.* It needs to be deployed only to employees handling CUI, whereas alternatives require deployment across entire organizations. Savings add up—for CMMC 2.0 Level 2 compliance, for example, PreVeil costs approximately *75% less than alternatives* and so is affordable even for small- to medium-size defense contractors.

PREVEIL

To learn more about how PreVeil can help your organization achieve CMMC Level 3 certification and continue to do work for the DoD, contact us at preveil.com/contact or +1 (857) 353-6480.
