

Realising the value of the world leading Cyber Security Platform

Working with Microsoft: Discover how to increase your ROI in cyber security and still address your Cloud security risks with Microsoft's integrated solution set

The challenge

The complexity of managing cyber security continues to increase. New technologies and new threats constantly present challenges for organisations faced with:

- Multiple cyber security vendors and solutions accumulated over time in reaction to threats.
- Separation of IT and security operations that limits full risk oversight and management.
- Limited integration across the cloud and on-premise estate that leads to gaps in some areas and duplication elsewhere.

How we can help

PwC has partnered with Microsoft to help you realise the value of a Cyber Security Platform approach by:

1. Creating the business case to adopt the Microsoft Platform approach based on cost optimisation and operational efficiency.
2. Facilitating trials and proof of value exercises to demonstrate benefits first hand.
3. Defining the transition roadmap to optimise the use of current assets and meet future risk and cost reduction objectives.

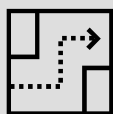

Why you should consider the Cyber Security Platform

A Cyber Security Platform departs from siloed, point Cyber solutions and prioritises integration across the entire spectrum of cyber security capabilities, from threat detection and response, data security and identity and access management. It then embeds these services into the digital estate to make them Secure by Design.

Increase Return on Investment

1. Reduce duplication of security technologies.
2. Reduce costs of developing and maintaining custom integrations.
3. Reduce licenses and simplify procurement.

Streamline Security Operations

1. Automate operations to reduce workloads.
2. Refocus security team to high value tasks.
3. Consolidate skills and training across both IT and Cyber operations.

Evolve to meet new threats

1. Gain visibility and control over your full cloud and on-prem estate.
2. Enable your business to securely adopt current and future technologies.
3. Benefit from Microsoft's continued Cyber R&D.

Why choose PwC?

Accelerators

Our Cloud Security Transformation Reference Architecture (CSTRA) and Total Cost of Ownership (TCO) Calculator enable us to rapidly provide you insight.

Experience

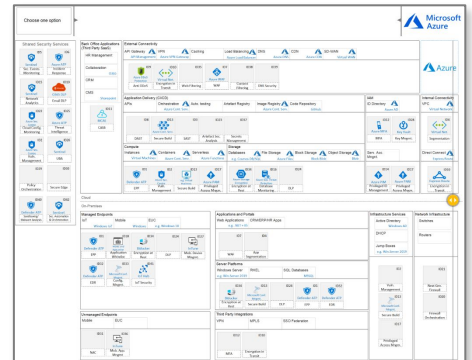

As Forrester's leading Global Cybersecurity Consulting Services provider¹, PwC brings insight of Cyber threats, management and controls across all industries.

Knowledge

PwC's status as a Gold Partner for Microsoft in Cybersecurity provides us with certified specialists to bridge the gap between Cyber risk and Microsoft technology.

The benefits of working with the PwC and Microsoft Alliance

The journey doesn't end there. We can continue to support your transformation, from SMEs to full transformation programme delivery, combining our cross-industry experience with our in-depth knowledge of the Microsoft security solutions, to help you realise value from your investment in a cyber security platform.

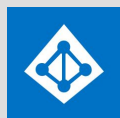

Security Operations with Microsoft Azure Sentinel

Plan, design and deploy your Security Operations Centre combining the Sentinel technology with PwC's experience in security operations, planning and management.

Data Security and Governance with Microsoft Information Protection

Discover, define and protect the key data in your organisation guided by PwC's data classification and policy expertise implemented by Microsoft Information Protection.

Identity and Access Management with Microsoft Azure Active Directory

Build and expand the access control foundations of your hybrid, multi or pure cloud estate with Azure AD and PwC's experience to manage legacy and modern systems.

Threat Detection and Protection with Microsoft 365 Defender suite

Define and keep your threat detection rules up to date informed by PwC's leading threat intelligence, analytics and advisory team.
