

Programme Control

Implement and run strong programme control and organisation to deliver against refreshed and clear programme objectives

We run programmes alongside you to establish clear governance, oversight and control to increase confidence and accelerate delivery.

Areas of focus for programme control

We provide direction and leadership based around four primary pillars.

- 1. Programme leadership** - Establishing robust governance and controlled delivery management
- 2. Supplier & contract management** - Effective contract management and supplier control with clear performance oversight
- 3. PMO** - Controlled programme delivery and transparency through effective PMO management
- 4. Workstream delivery** - Accelerating the delivery of key areas including data migration, reporting, testing and business change

Benefits of our approach

- Increased clarity over case for change
- Improved governance and transparency
- Greater confidence in programme outcomes
- Tighter control over supplier delivery

Rapid Mobilisation

- Quickly mobilise a highly experienced team with relevant delivery and technical expertise
- Build our understanding of the programme objectives and stakeholder views, ensuring there is clarity of the case for change

Executive Confidence

- Establish clear and effective governance to drive delivery and ensure transparency
- Identify and work with stakeholders to ensure alignment and engagement
- Engage with suppliers to assess contracts and establish effective ways of working

Accelerated delivery

- Leverage our tool sets to deploy an effective PMO
- Implement robust reporting and monitoring to ensure visibility of progress
- Bring our suite of templates to accelerate the mobilisation and delivery of key workstreams

We will support your programme implementation by establishing clear governance and oversight at leadership, management and workstream level

PwC Programme Control approach

Deployment & Validation

- Rapidly deploy our team and quickly build our understanding of the current position
- Assessment and refresh of the case for change and objectives
- Identify and engage with stakeholders to ensure alignment and ongoing effective management.

Programme Setup

- Establish effective governance and PMO controls to provide visibility of progress and risks as they arise
- Develop credible delivery plans that align to resource requirements
- Reset supplier relationships and contracts, embedding ongoing control and performance monitoring

Direction & Delivery

- Provide ongoing programme leadership and direction to maintain alignment with benefits
- Accelerate delivery across key workstreams

Next Steps

An initial conversations so we can:

- Discuss the common challenges our clients are experiencing with their Microsoft Programmes
- Explain more about our Programme Control approach and how we support and deliver value for our clients
- Answer any questions and map out a timeline for achieving your outcomes

Reach out to the team to start the conversation. Their details can be found below.

Case Study: Utility services provider

We supported a rapidly growing client to improve processes, controls and data across their back office to ensure fitness for their future. Our client trusted our outcome-driven team to guide and manage delivery covering:

- Successful implementation of D365 as an ERP solution
- Automated reporting which is now an organisation wide solution, allowing the full value of integrated reporting and data to be unlocked
- New data, reporting and process designs which has allowed the client to see improved data quality and business processes whilst replacing legacy solutions reliant on spreadsheets
