

Princh - the standard for printing, copying, scanning and payment in public spaces

Princh is a simple cloud-based solution that allows your users to easily and securely print from their own devices, and intuitively copy or scan their documents. Here are the key reasons why Princh is the standard for printing, copying, scanning and payment in public spaces:

Integrated electronic payment

Electronic payment is truly integrated, which means your organization does not need to set up any payment agreements or POS hardware. Users can simply pay electronically for their documents using Apple Pay, Google Pay, bank cards or by cash.

Industry-leading security

Princh ensures your users' privacy by design. The decryption keys to the users' documents are only stored on the local print server, meaning neither Princh nor any third party can access their contents. Additionally, the solution does not store any data, and documents are automatically deleted after 24 hours. Moreover, Princh is ISO 27001:2022 certified, which is considered the 'gold standard' in information security.

Simplicity & user-friendliness

With Princh, your users can easily print from their mobile phones, tablets or laptops. Additionally, there are no accounts or logins, and users don't have to download any apps; they can print via their preferred browser.

Over 5000 locations worldwide, including city governments such as Miami, San Diego, and Stockholm) are already using Princh. [Book your installation](#) today to integrate Princh into your Microsoft Universal Print setup!
