

Infraestructure for applications

Design and implementation of physical, virtual, cloud and hybrid environments for the implementation of ERP, CRM and Electronic Commerce systems.

Infraestructure for applications

With the Infrastructure for Applications solution, it is possible to have solid and flexible bases for the execution of an ERP, a CRM or an eCommerce system, which for companies is key to achieving an optimal return on investment.

- Predictability in IT projects
- Clarity in the cost-benefit equation
- Years of experience with clients of different sizes in different vertical markets
- Knowledge transfer to employees
- On site training

Configuration

- Configuration of process flows and reports
- Subscription setup in Microsoft Azure
- User permission settings for access

Implementation

- Implementation of management tools
- Deployment of disk and backup and storage management applications
- Implementation of changes to the infrastructure

Optimization

- Performance optimization and scalability
- Integration of business applications with Office 365
- Defining policies for remote access, security settings and optimized performance

"Prisma had a highly qualified team with a real vocation for service and excellent knowledge transfer; We like to work side by side with our suppliers and we do it with them. With Microsoft Azure we obtained several important benefits: transparent and competitive costs, agile scaling of the infrastructure and availability, to respond to the needs of the business ".

-Mariano Gorla, Gerente de Sistemas en Donmarío Semillas
