

# Teamy

## Communicator

### Microsoft Teams

## Objectives

### Implementation

Implement Teamy Communicator in the customer's Azure and Office 365 environment and transfer the knowledge of the integrated use of the platform with Teams, with the aim of accessing an application for sending chat messages such as announcements of new initiatives, incorporation of staff, learning or different reasons for disseminating communications throughout the organization.

### Functions

- Create adaptive communication card templates.
- Access a control interface and send messages.
- Get previews, collaboration environment, and message settings.
- Extend your personalized communication capabilities by accessing telemetric data to know how many users have read, recognized or interacted with a message.

With Teamy you can create messages personalized that may contain images, surveys with multiple answers, lists, links and space for responses with additional comments and all the information collected with the receipt of these messages, may be viewed by the administrator through Power Bi reports.

Do you like this new tool?
