CA Gatekeeper

The Ultimate Solution for Conditional Access Policy Management

What is CA Gatekeeper?

CA GateKeeper is a cloud-based service that backups and restores all your tenant conditional access policies to a specific date and time. It also provides advanced management capabilities, such as change prevention, approval workflows, policy comparison, and user-friendly views of policy settings and changes. With CA GateKeeper, you can safeguard your policies from accidental deletion, cyberattack, or human errors, and comply with regulatory and audit requirements.

Why do you need CA Gatekeeper?

Conditional access policies are the key to securing your organization's cloud resources.

They control who can access what, when, where, and how.
When you have multiple tenants, complex configurations, and frequent changes, managing these policies can be challenging and risky.
Your policies may be compromised or lost, leading to data breaches, compliance violations, and operational disruptions.

CA Gatekeeper can help you:

Set different protection levels and require approval workflows for policy changes to prevent unauthorized changes.

Policies can be restored to a specific date and time, which is useful in emergencies.
You can also compare policies across different dates and versions.

Use free text search, multi-tenant support, role-based access management, and reports to manage your policies efficiently.

In case of a major security incident, you can disable or restore all policies with a single click.

CA Gatekeeper

PROTECT, RESTORE, AND MANAGE
your policies with ease and efficiency

Try CA Gatekeeper today and see the difference it can make.
