

ProcureSQL Fabric Data Architect-as-a-Service

Cost: \$24,000 | Duration: 80 hours over 4 weeks

OVERVIEW

ProcureSQL's Data Architect-as-a-Service (DAaaS) provides you with the ability to empower your business to harness the full potential of your data. You can leverage hours for guidance, support, or implementation of your data architecture initiatives.

Leveraging this service gives you access to experienced architects who are passionate about data and analytics. These consultants can assist you in evaluating your current architecture, identifying requirements, and developing tailored strategies that align with your business needs. We can guide you through the selection of the right technologies, best practices, and security compliance.

DAaaS empowers organizations to build a secure, scalable, and future-ready data ecosystem, driving efficiency, performance, and a competitive advantage. We structure the DAaaS offer as a bucket of hours that you consume one time, repeat as needed, or adapt as necessary to best serve your projects.

OPTIONS

Current State Review	Technology Planning
Best Practice Guidance	Skill Development
Code Review	Data Platform Implementation
Power BI Report Creation	Spark & Pipeline Development

BENEFITS

Expert Guidance

Access to architects who each have over ten years of experience with the Microsoft Data Platform.

Cost-Based Analysis

We build a total cost of ownership estimate so there are no surprises with our services or the cloud cost to ensure your business justification outweighs the total associated costs.

Not Just Analytics or Data Management

Our team can help with all your needs for database administration, data architecture, data engineering, and analytics.

Risk Assessment

We identify and evaluate potential threats and vulnerabilities towards security, compliance, and operational availability.

Continuous Engagements

We are available for long-term relationships, rather than just short-term

Technology Roadmap

We ensure you are heading down the right path for success by using technology to achieve your business objectives.

WE HELP CLIENTS TO...

Save \$100K+ in compute costs.

Clean, organized data ready for AI.

Reduce mistakes by implementing automation.

Reduce nightly load times by hours by optimizing code and data storage strategy.
