PROJILITY Hammerhead PPM to Teams Connector

Introduction and Demonstration

Business Needs

- Enterprises are rolling out Microsoft Teams to support improved enterprise collaboration and communication via single application

- PMOs and IT organizations have been rolling out Project Online (PPM) to support Portfolio, Project, Resource, Task Management and Status reporting processes

- There is interest in integrating an existing/new PPM environment into Teams:

  1. Streamline end user access to PPM data, views, and reports

  2. Speed use and adoption of Project Online via a unified UI

  3. Potentially automate creation and alignment of Teams/Project Online components to drive consistency and save time, manual work by a PM or PMO
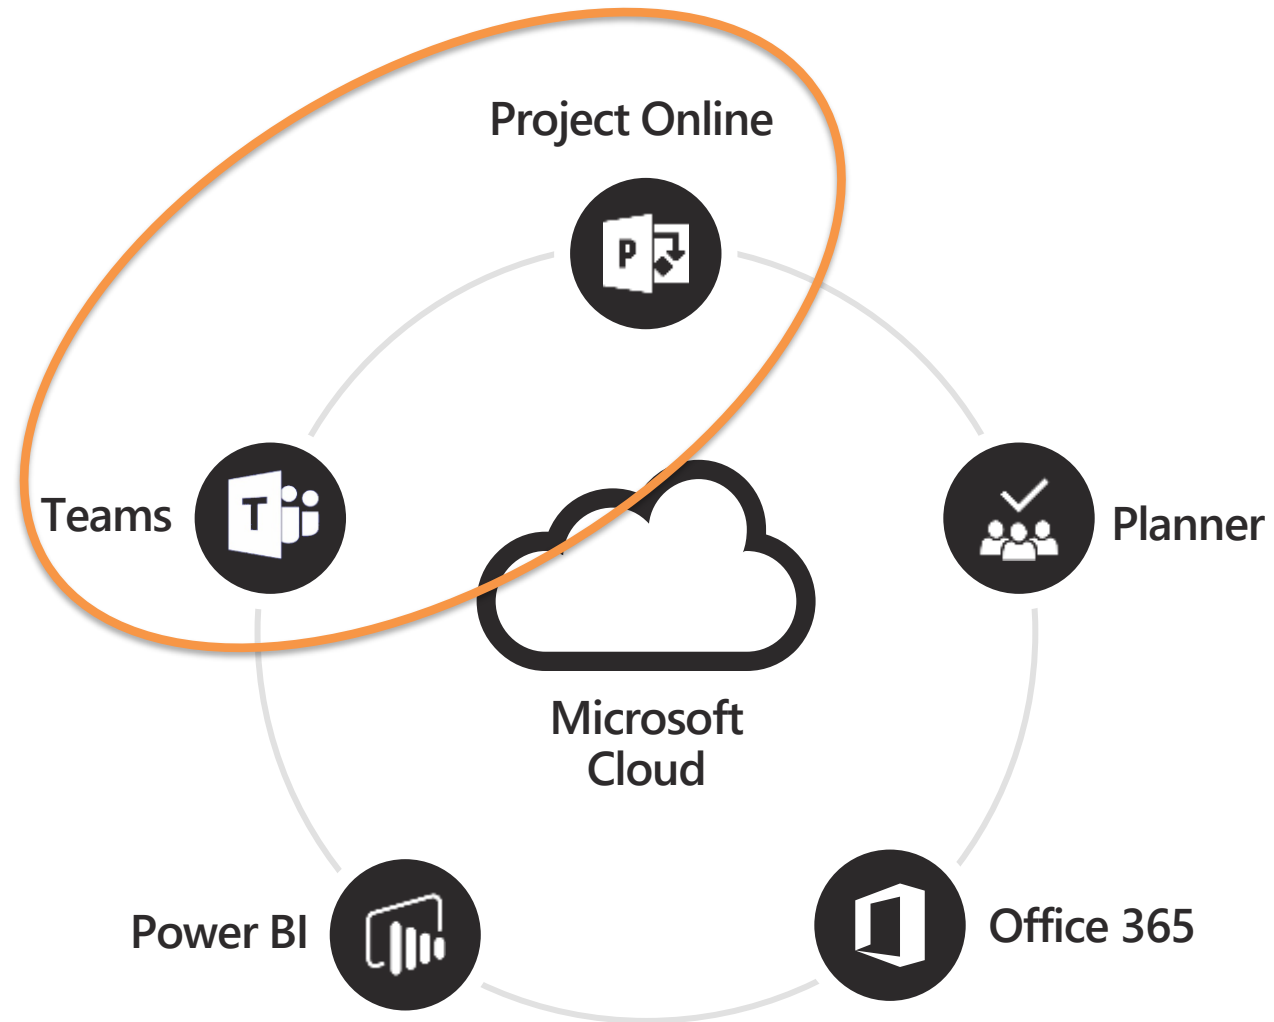

Improved Collaboration on Projects

Project management has to be **more collaborative and agile** to ensure **the success of projects** across organizations. Project teams are connected and information needs to be shared more easily and made accessible.

By introducing Teams, Microsoft ambition is to **help teams to organize all their activities with a single entry point** - document sharing, collaborative task management, persistent discussion threads and more.
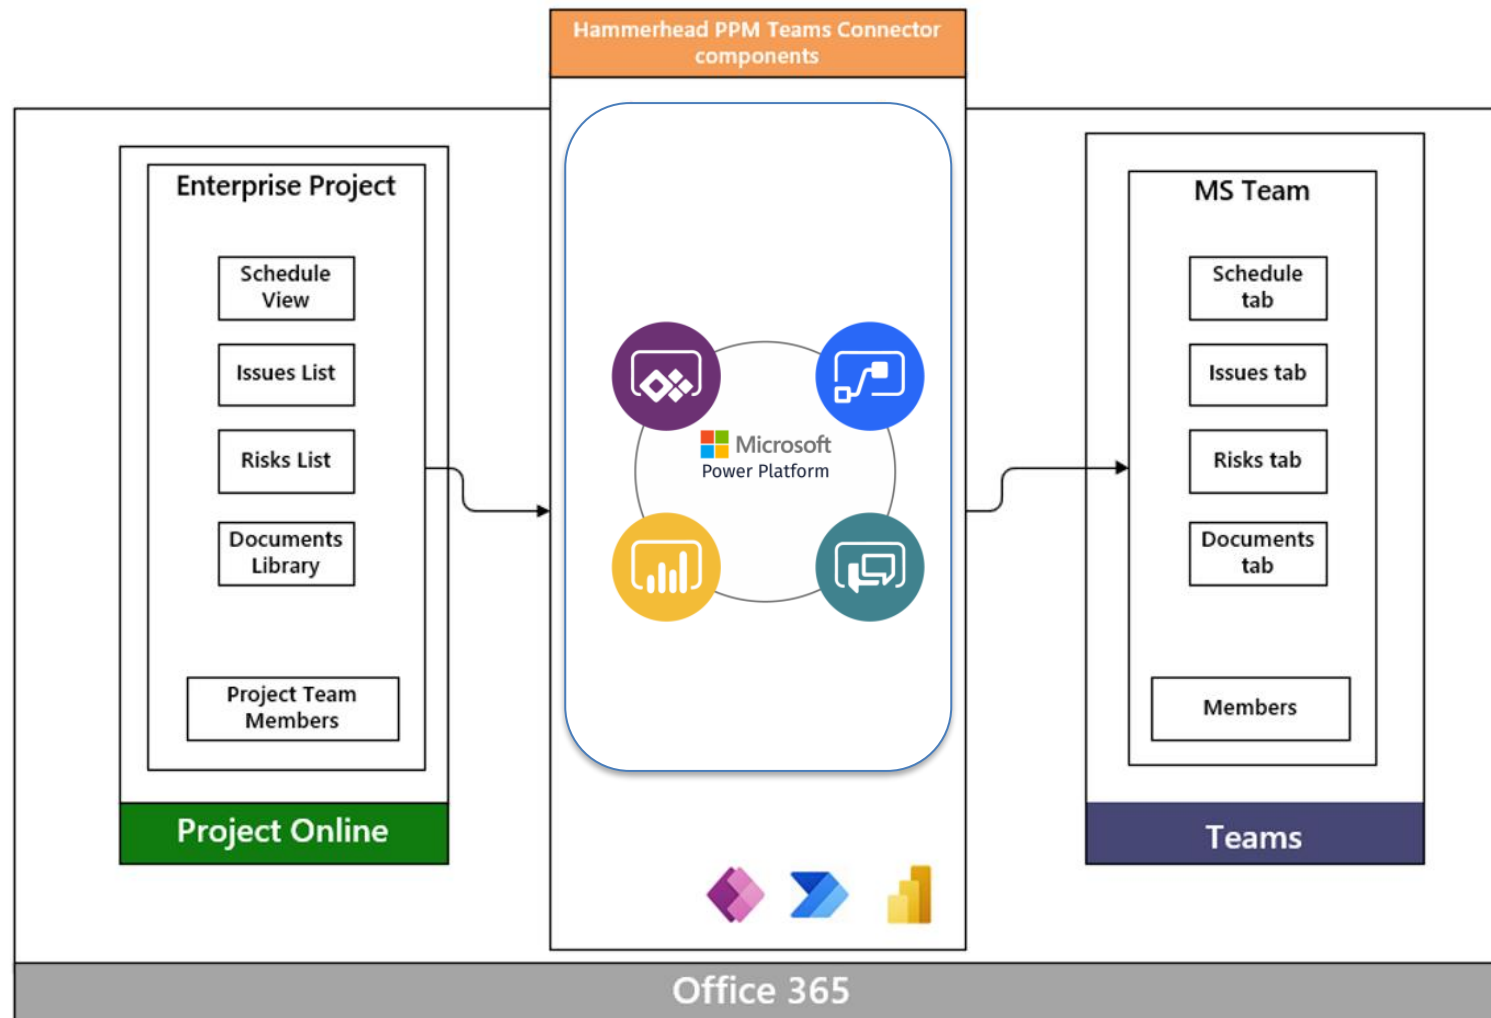

It is now possible to **integrate project information managed within Project Online,** Microsoft Office 365's Project Portfolio management solution, **within Teams.**

Project Online
