Cohesive Visibility & Control

Situational Awareness Focused Dashboard & Insights

Top API Attack Distribution

A

Comprehensive Protection

Monitor, authenticate, control access, and encrypt to prevent common API issues.

Data Safeguarding

Ensure confidentiality, integrity, and availability with authorization, rate limiting, audit logging, and input validation.

OWASP Defense

Shields against the latest OWASP API Security Top 10 threats, ensuring robust protection.

Customised Rollout with Active Checks

Guardrails

- Encryption (TLS 1.2+)
 Protect data in transit
- Authentication (OAuth 2.0, JWT)
 Validate user identities
- Authorization (RBAC)
 Limit access to sensitive data

- Input Validation
 Prevent SQL injections, Cross-
 - Prevent SQL injections, Cross-site scripting (XSS), BOLA
- Rate Limiting
 Throttle excessive requests

- 6 API Key Management
 Secure API Access
- 7 Continuous Health Check
 Regular Security Audits & Penetration Testing

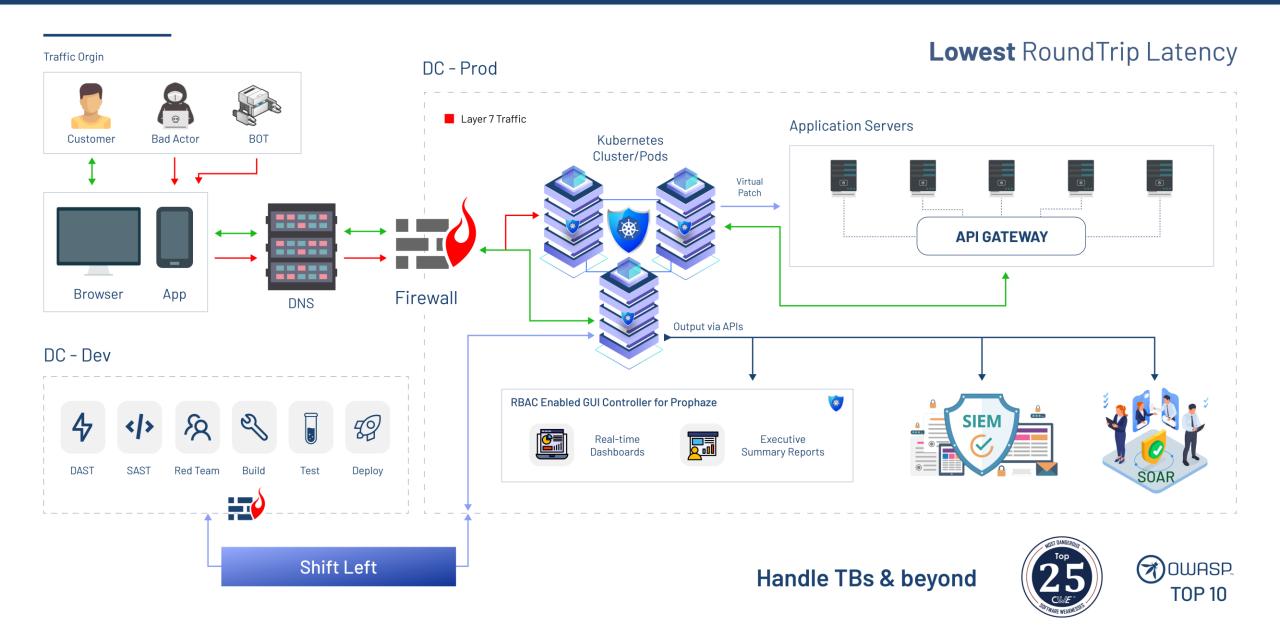

Imperatives

Prophaze - Architecture Tuned for Enterprises

....plus leveraging in house AI/ML Engine

Agentless run-time protection for Applications & APIs

Mid Market

Deploy in Minutes - not months with zero config & downtime

Security Automation - Automated protection for known/unknown vulnerabilities

Cost Effective - remove additional expense on training & maintenance

Cloud Native - Container supported deployments fits well with DevSecOps

Enterprise

Application Aware - Generates AI/ML profiles for applications independently

Self Learning - Automated profiles based on incidents & AL/ML tech stack

Multi Cloud - Supports Private/Public/Hybrid/On-Premise deployment

Customized Build - Customized build based on domain specific use cases

How it Works

*

AI/ML Profiler

- Runs in background for a few days
- ML learns User & App behavior, API and container logic
- Profiles deep contents of payloads, static attributes of processes & files and previous threats

€

Automated Policy

- Blacklisting
- Whitelisting
- Anomalies filtering
- Virtual Patching
- Threats updates

DevOps Override Control

- · Threat monitoring
- Block mode controls
- Custom rules
- API publishing
- Rate limiting

- Reports
- Integration options
- Events
- Alerts

Dynamic defense against never ending onslaught of attacks

Requires Zero configuration, tuning, or maintenance

Eliminates the cycle of breaches and patching
