Insurance

Clarity from Complexity. Faster Decisions.

Problem

Insurers and brokers operate in some of the most document-heavy, high-stakes environments — yet critical decisions often rely on slow, manual processes:

01. Claims data is scattered across PDFs, emails, and systems

02. Reserve accuracy is undermined by outdated or unstructured data

03. Regulatory summaries are slow and difficult to trace

04. Manual fraud screens miss patterns or slow case progression

05. Underwriting is inconsistent across low- and high-value cases

Our Solution

ProSyft deploys embedded AI agents — including EVIE — directly inside your environment to read, reason, and report across your claims, risk, and compliance data.

01. Ingests and interprets PDFs, Excel files, Word docs, and structured forms

02. Auto-generates summaries, audit packs, and memos in Word, Excel, or PDF

03. Flags anomalies, builds timelines, and surfaces exposure risks

04. Runs fully behind your firewall or VPC with traceability and audit logging

05. Works with your existing SharePoint, claims systems, and templates

ProSyft

Key Benefits

For Insurance Teams & Brokers:

Faster Claims & Case Handling – Cut down case review time while improving first-touch quality

Improved Reserve Visibility – Track patterns in IBNR, RBNP, and complex risk exposures

Audit & Regulatory Ready – Instantly generate compliant, document-linked summaries

Proactive Fraud Detection – Cross-check submissions and attachments for early red flags

Smarter Underwriting – Auto-assemble review packs and streamline low-value case decisions

Scalable Without Complexity – Grow operations without adding tech burden or headcount

Enterprise-Grade Security – Fully explainable, RBAC-enabled, and built for regulatory scrutiny

Zero Disruption – Integrates with current tools and structures; no retraining required
