

## Protera Networking services discovery engagement on Microsoft Azure

### Networking Strategy on Azure: 4-Week Assessment

Connect and manage cloud and application resources securely with Protera's Azure network discovery assessment. Protera will customize a networking engagement that suits your businesses' needs for cloud adoption, cloud transformation, or cloud remediation.

This Networking Discovery Assessment helps technical and business stakeholders looking for a clear roadmap sourcing the current IT landscape and models the future environment on Azure with costs, timeline, target architecture, and project plan in mind.

This 4-week discovery assessment includes:

#### Phase 1

- Align on assessment objectives and goals
- Discovery\Design session on existing architecture
- Understand and capture current pain points
- Understand and validate desired end state

#### Phase 2

- Present strategies to alleviate current pain points
- Go over well architected network diagram and technology inventory
- Discuss next steps

The Objectives for a Protera managed Azure Network Engagement can include improving security posture, network availability, and network performance through both technology and architecture arrangements. Protera leverages best in class technology and Microsoft approved methodologies to ensure a sustainable solution.

A partner with a deep engineering relationship with Microsoft, Protera uses a well-architected cloud adoption framework backed by automation to reduce complexity, accelerate timelines, and drive down the cost of critical application migrations versus a traditional approach. Protera excels at providing implementation and ongoing management services for cloud infrastructures to secure a supportable future.
