

Migration Accelerator

Make content migration an opportunity, not a challenge, with our AI-powered software.

Proventeq's Migration Accelerator is the content migration tool for seamless migration from your existing enterprise content management platform.

It allows you to gain the maximum value from your business information by ensuring its new home is truly optimized for productivity, collaborative working, and business growth. It is the perfect migration tool for high-volume, complex content migration projects where integrity, continuity, and enrichment are a priority.

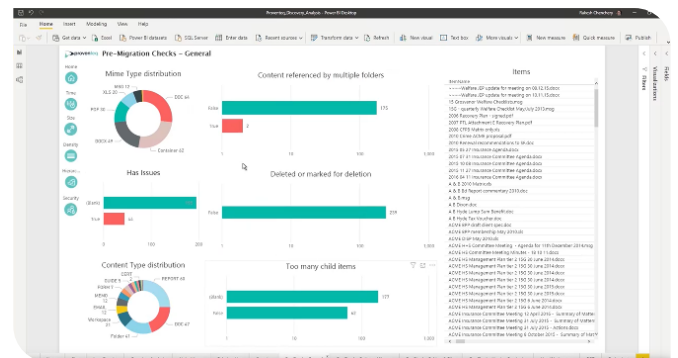

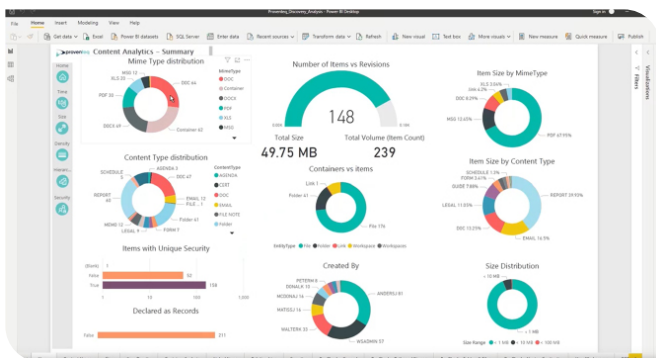

Before migration

Gain actionable insights into your content

Full discovery and analysis of your content to accurately inform your new architecture with detailed drill-down reports using Power BI.

Identify potential issues

Stay on schedule and in budget with intelligent pre-migration checks which preemptively identify potential risks to your migration project.

During migration

Maintain business continuity

Minimize downtime thanks to high-speed, incremental migration and reusable scheduled tasks.

Seamlessly enforce compliance

Customizable rules give you the power to ensure compliance to your internal and industry standards by applying the required retention and sensitivity labels.

Intelligently classify documents

Our software intelligently recognizes and classifies the increasing volume of unstructured data created by your business every day.

Enrich content metadata

Easy to configure rules allow metadata values to be set in your new target system either informed by your source system or be computed as part of the rules.

Securely map users and groups

Map active or inactive users and groups from your source system to active users in your target system including access rights. Preserving content security.

Manage links

Update links inside documents with the source link in your new system to keep them active post-migration.

Supported source systems

Target systems

After migration

Reduce downtime

Expedite go-live with minimal downtime achieved using incremental (delta) migration.

Integrate your content portfolio

Want to keep an existing system live after migration? Consolidate content from multiple source systems and repositories simply and quickly.

Improved user productivity

Exploit the potential of your content through optimized AI and searchability, and turn your information into your most powerful business asset.
