Microsoft 365 Health & Security Diagnostic

Achieve stronger security, lower your total cost of ownership, simplify management, and realize ongoing value from your Microsoft 365 investment—all through a targeted diagnostic assessment built around industry best practices.

Microsoft 365 Operational Health & Security Diagnostic

Today's organizations face evolving security challenges as cloud applications and mobile workstyles accelerate productivity—but also introduce new risks. Our Microsoft 365 Operational Health & Security Diagnostic is a rapid, lightweight engagement that leverages CIS Controls and Microsoft best practices to identify gaps, misconfigurations, and opportunities for improvement across your M365 environment.

Why choose this assessment?

- Quickly determine your M365 operational health and security maturity.

- Gain clarity on critical risks and compliance gaps.

- Receive a practical, step-by-step plan for strengthening your security posture.

What's Included:

- **Comprehensive Review:** We assess your current Microsoft 365 configuration, policies, and controls, focusing on identity, access, data protection, and device security.

- **CIS & Microsoft Best Practices:** The assessment is grounded in industry-leading frameworks, ensuring recommendations are actionable and aligned with proven standards.

- **Prioritized Roadmap:** You'll receive a clear, prioritized roadmap for continuous improvement—enabling you to address high-impact risks first and plan for ongoing enhancements.

- **Actionable Insights:** Findings are delivered in a concise report, highlighting quick wins, strategic initiatives, and governance recommendations tailored to your business needs.
